**Math In Economics (Second Edition)** Susheng Wang, 2015-06-29 This textbook concisely covers math knowledge and tools useful for business and economics studies including matrix analysis basic math concepts general optimization dynamic optimization and ordinary differential equations Basic math tools particularly optimization tools are essential for students in a business school especially for students in economics accounting finance management and

marketing It is a standard practice nowadays that a graduate program in a business school requires a short and intense course in math just before or immediately after the students enter the program Math in Economics aims to be the main textbook for such a crash course The 1st edition was published by People's University Publisher China This new edition contains an added chapter on Probability Theory along with changes and improvements throughout *Mathematical Principles of the Internet, Volume 1* Nirdosh Bhatnagar, 2018-11-20 This two volume set on Mathematical Principles of the Internet provides a comprehensive overview of the mathematical principles of Internet engineering The books do not aim to provide all of the mathematical foundations upon which the Internet is based Instead they cover a partial panorama and the key principles Volume 1 explores Internet engineering while the supporting mathematics is covered in Volume 2 The chapters on mathematics complement those on the engineering episodes and an effort has been made to make this work succinct yet self contained Elements of information theory algebraic coding theory cryptography Internet traffic dynamics and control of Internet congestion and queueing theory are discussed In addition stochastic networks graph theoretic algorithms application of game theory to the Internet Internet economics data mining and knowledge discovery and quantum computation communication and cryptography are also discussed In order to study the structure and function of the Internet only a basic knowledge of number theory abstract algebra matrices and determinants graph theory geometry analysis optimization theory probability theory and stochastic processes is required These mathematical disciplines are defined and developed in the books to the extent that is needed to develop and justify their application to Internet engineering

**Multiple-Criteria Decision Making** Po-Lung Yu, 2013-04-09 This book is an outgrowth of formal graduate courses in multiple criteria decision making MCDM that the author has taught at the University of Rochester University of Texas at Austin and University of Kansas since 1972 The purpose is on one hand to offer the reader an integral and systematic view of various concepts and techniques in MCDM at an introductory level and on the other hand to provide a basic conception of the human decision mechanism which may improve our ability to apply the techniques we have learned and may broaden our insight for modeling human decision making The book is written with a goal in mind that the reader should be able to assimilate and benefit from most of the concepts in the book if he has the mathematical maturity equivalent to a course in operations research or optimization theory Good training in linear and nonlinear programming is sufficient to digest perhaps easily most of the concepts in the book *Number Theory, Algebra, Mathematical Analysis, and Their Applications* Ivan Matveevič Vinogradov (Mathematiker), 1993 This work is dedicated to the 100th anniversary of the birth of I M Vinogradov It contains papers ranging over various areas of mathematics including number theory algebra theory of functions of a real variable and of a complex variable ordinary differential equations optimal control partial differential equations mathematical physics mechanics and probability *Advanced Mathematics for the Modeling and Solution of Challenging Problems in Engineering* Oscar Castillo, Gökhan Çuvalcıoğlu, Feride Tuğrul, 2025-06-01 This book includes studies that give mathematical solution

methods and mathematical modeling to support these methods for solving problems in the current application area of engineering as well as studies that include solutions for problems that are also related to current life areas In this book some current problems in the field of mathematics and engineering solutions to solve these problems and existing engineering methods for these problems are included Basically machinery chemistry electronics computers construction environment etc studies in both the application and theoretical fields of mathematics are needed to solve optimization modeling encryption methods and thermal problems that are currently encountered in engineering fields In this book some current problems are presented and related theoretical and applied mathematical studies are included

*Essays and Surveys on Multiple Criteria Decision Making* P. Hansen, 2012-12-06 The Fifth International Conference on Multiple Criteria Decision Making not surprisingly had several objectives First it aimed at being a forum for exchange and intensive discussion of recent ideas on theory and practice of MCDM following the now well established tradition of the previous meetings in the series organized by H Thiriez and S Zionts in Jouy en Josas 1975 S Zionts in Buffalo 1977 G Fandel and T Gal in Hagen Konigswinter 1979 and J Morse in Newark 1980 Second closer contacts were desired between participants in these meetings and other active groups in the field prominent among which is the European Working Group on Multiple Criteria Decision Aid Third participation of senior or junior researchers who had recently developed important new methodologies such as the Analytical Hierarchy Process was actively sought for Fourth a synthesis of the rapidly expanding field of MCDM was to be made through selective surveys by leading researchers in the various areas it comprises Fifth cross fertilization and multidisciplinary research was to be encouraged through presentations on the connections between MCDM and mathematics economics game theory computer science and other subjects Sixth much emphasis was to be given to real world applications of MCDM particularly large scale ones and or pioneering work in new fields The present volume reflects the general agreement observed among participants that these goals were largely attained

**Continuous-Time Markov Decision Processes** Alexey Piunovskiy, Yi Zhang, 2020-11-09 This book offers a systematic and rigorous treatment of continuous time Markov decision processes covering both theory and possible applications to queueing systems epidemiology finance and other fields Unlike most books on the subject much attention is paid to problems with functional constraints and the realizability of strategies Three major methods of investigations are presented based on dynamic programming linear programming and reduction to discrete time problems Although the main focus is on models with total discounted or undiscounted cost criteria models with average cost criteria and with impulsive controls are also discussed in depth The book is self contained A separate chapter is devoted to Markov pure jump processes and the appendices collect the requisite background on real analysis and applied probability All the statements in the main text are proved in detail Researchers and graduate students in applied probability operational research statistics and engineering will find this monograph interesting useful and valuable

**Mathematics Related to Physics** Raoul Bott, 1994 Volume 4 Fuzzy Methods for Assessment and Decision Making Michael Gr.

Voskoglou, 2024-10-08 Fuzzy Methods for Assessment and Decision Making presents the assessment of learning and problem solving skills with qualitative grades. These methods are outcomes of the author's research work on the subject for more than 20 years. In particular, a hybrid assessment model uses the Center of Gravity COG defuzzification technique, closed real intervals, grey numbers, neutrosophic sets, and soft sets as tools. The book starts with the basic mathematical background that is needed for an understanding of its contents. The Rectangular Fuzzy Assessment Model RFAM of Subbotin and Voskoglou is presented next, the outcomes of which are compared to those of the GPA index. The book presents innovative fuzzy assessment methods enabling readers to assess the mean and quality performance of learning or problem solving skills of a group of students when qualitative linguistic grades are used for this purpose. In the case of using linguistic grades for the assessment of a group's skills, the classical method of calculating the mean value of the numerical grades cannot be applied. Also, no safe conclusions can be obtained on comparing the quality performance of two groups when the values of their GPA index are equal. Presents innovative fuzzy assessment methods to enable readers to assess the mean and quality performance of learning. Discusses fuzzy logic and techniques for decision making in all domains. Includes applications of fuzzy decision making as a hybrid model using soft sets, grey numbers, and neutrosophic sets. Multi-criteria Decision Making Methods with Bipolar Fuzzy Sets Muhammad Akram, Shumaiza, José Carlos Rodríguez Alcantud, 2023-05-21 This monograph discusses the theoretical and practical development of multicriteria decision making MCDM. The main purpose of MCDM is the construction of systematized strategies for the optimisation of feasible options as well as the justification of why some alternatives can be declared optimal. However, at times we must make decisions in an uncertain environment and such inconvenience gives rise to a much more elaborate scenario. This book highlights models where this lack of certainty can be flexibly fitted in and goes on to explore valuable strategies for making decisions under a multiplicity of criteria. Methods discussed include bipolar fuzzy TOPSIS method, bipolar fuzzy ELECTRE I method, bipolar fuzzy ELECTRE II method, bipolar fuzzy VIKOR method, bipolar fuzzy PROMETHEE method, and two tuple linguistic bipolar fuzzy Heronian mean operators. This book is a valuable resource for researchers, computer scientists, and social scientists alike.
