catalog of mid twentieth century practices of mathematical drawing and calculation in design that preceded and anticipated digitization as well as an account of the formal compendia that became a cultural currency shared between modern mathematicians and modern architects Witt presents a series of extensively illustrated biographies of method episodes that chart the myriad ways in which mathematics particularly the mathematical notion of modeling and drawing was spliced into the creative practice of design These include early drawing machines that mechanized curvature the incorporation of geometric maquettes theorems made flesh into the toolbox of design the virtualization of buildings and landscapes through surveyed triangulation and photogrammetry formal and functional topology stereoscopic drawing the economic implications of cubic matrices and a strange synthesis of the technological mineral and biological crystallographic design Trained in both architecture and mathematics Witt uses mathematics as a lens through which to understand the relationship between architecture and a much broader set of sciences and visual techniques Through an intercultural exchange with other disciplines he argues architecture adapted not only the shapes and surfaces of mathematics but also its values and epistemic ideals

Things That Move Tim Anstey, 2024-04-23 A history of architecture not as the art of what stays but of what changes and moves We tend to think of architecture as a practice in permanence but what if we looked instead for an architecture of transience In *Things That Move* Tim Anstey does just that rather than assuming that architecture is at a certain level stationary he considers how architecture moves subjects referring to its emotive potential in the experience it creates how it moves objects referring to how it choreographs bodies in motion and how it is itself moved referring to the mixture of materials laws affordances and images that introduce movement into any architectural condition The first of the book's three sections *Cargoes* highlights the mobile peripheries of architectural history through the eighteenth and nineteenth centuries It asks what kinds of knowledge can be included under a discussion of something called architecture noting the connections

between discourses of the lithe and the technical on the one hand and those associated with the production of monumental static compositions on the other The second section Dispatches reinterprets early architectural theory by examining the Renaissance ideal of decorum the nature of the architectural work and the ways in which architects are constituted as authors Lastly Vehicles considers building in terms of literal and metaphorical movement using two cases from the twentieth century that investigate the relationship between architecture and cultural memory Using a broadly forensic approach to connect details in otherwise disparate cases Things That Move is a breathtakingly capacious architectural account that will change the way readers understand buildings their becoming and their significance Golden Dreams Kevin

Architectures of Care Brittany Utting,2023-12-05 Drawing from a diverse range of interdisciplinary voices this book explores how spaces of care shape our affective material and social forms from the most intimate scale of the body to our planetary commons Typical definitions of care center around the maintenance of a livable life encompassing everything from

shelter and welfare to health and safety Architecture plays a fundamental role in these definitions inscribed in institutional archetypes such as the home the hospital the school and the nursery However these spaces often structure modes of care that prescribe gender roles bodily norms and labor practices How can architecture instead engage with an expanded definition of care that questions such roles and norms producing more hybrid entanglements between our bodies our collective lives and our environments Chapters in this book explore issues ranging from disabled domesticities and nursing unbuilding whiteness in the built environment practices and pedagogies of environmental care and the solidarity networks within The Cloud Case studies include Floating University Berlin commoning initiatives by the Black Panther party and hospitals for the United Mine Workers of America among many other sites and scales of care Exploring architecture through the lenses of gender studies labor theory environmental justice and the medical humanities this book will engage students and academics from a wide range of disciplines
