**CNC milling and turning in model making** Christoph Selig, Computer-controlled production has also become indispensable in model making. Not only industrial manufacturers but also more and more model makers themselves are using CNC-controlled machines to produce parts. In this book, Christoph Selig initiates you into the secrets of CNC milling and for the first time, CNC turning. He comprehensively covers the hardware, the software, and the machine tools. The subject is the basics, but above all, the practice of conversion and CNC-controlled manufacturing so that the reader gets a complete insight into this fascinating technology, which in some cases revolutionizes model making. From the content: Why CNC technology for the hobby sector? Axis drives. The control types: Stepper motors. Construction and operation of the stepper motor control SRS 1X035. The Mach3 control software. Useful accessories. The practice: Generating the CNC programme. Generating G-code from DXF or HPGL. From the idea to the finished part. Milling technology. Turning technology. Practical examples: Milling. Practical example: turning. The CNC milling machine as a drawing machine. Manual G-code programming.

**Build Your Own CNC Machine** James Floyd Kelly, Patrick Hood-Daniel, 2010-02-09 Do you like to build things? Are you ever frustrated at having to compromise your designs to fit whatever parts happen to be available? Would you like to fabricate your own parts? Build Your Own CNC Machine is the book to get you started. CNC expert Patrick Hood-Daniel and best-selling author James Kelly team up to show you how to construct your very own CNC machine. Then they go on to show you how to use it, how to document your designs in computer-aided design (CAD) programs, and how to output your designs as specifications and tool paths that feed into the CNC machine, controlling it as it builds whatever parts your imagination can dream up. Don't be intimidated by abbreviations like CNC and terms like computer-aided design. Patrick and James have chosen a CNC machine design that is simple to fabricate. You need only basic woodworking skills and a budget of perhaps 500 to 1,000 to spend on the wood, a router, and various other parts that you'll need. With some patience and some follow-through, you'll soon be up and running with a really fun machine that'll unleash your creativity and turn your imagination into physical reality. The authors go on to show you how to test your machine, including configuring the software. Provides links for learning how to design and mill whatever you can dream up. The perfect parent-child project that is also suitable for scouting.
