Postharvest Biology and Technology of Horticultural Crops Mohammed Wasim Siddiqui, 2015-05-01 The ultimate goal of crop production is to provide quality produce to consumers at reasonable rates. Most fresh produce is highly perishable and postharvest losses are significant under the present methods of management in many countries. However, significant achievements have been made during the last few years to curtail postharvest losses in fruit and vegetables. Quality of Life Through Quality of Information European Federation for Medical Informatics. Conference, John Mantas, European Federation for Medical Informatics, 2012 Role of e health in pursuing benefits in terms of quality of life for patients, health care personnel, citizens and society Fundamentals of Clinical Trials Lawrence M. Friedman, Curt D. Furberg, David L. DeMets, David M. Reboussin, Christopher B. Granger, 2015-08-27 This is the fifth edition of a very successful textbook on clinical trials methodology written by recognized leaders who have long and extensive experience in all areas of clinical trials. The three authors of the first four editions have been joined by two others who add great expertise. A chapter on regulatory issues has been included and the chapter on data monitoring has been split into two and expanded. Many contemporary clinical trial examples have been added. There is much new material on adverse events, adherence issues, analysis, electronic data, data sharing and international trials. This book is intended for the clinical researcher who is interested in designing a clinical trial and developing a protocol. It is also of value to researchers and practitioners who must critically evaluate the literature of published clinical trials and assess the merits of each trial and the implications for the care and treatment of patients. The authors use numerous examples of published clinical trials to illustrate the fundamentals. The text is organized sequentially from defining the question to trial closeout. One chapter is devoted to each of the critical areas to aid the clinical trial researcher. These areas include: pre-specifying the scientific questions to be tested and appropriate outcome measures; determining the organizational structure; estimating an adequate sample size; specifying the randomization procedure; implementing the intervention and visit schedules for participant evaluation; establishing an interim data and safety monitoring plan; detailing the final analysis plan and reporting the trial results according to the pre-specified objectives. Although a basic introductory statistics course is helpful in maximizing the benefit of this book, a researcher or practitioner with limited statistical background would still find most if not all the chapters understandable and helpful. While the technical material has been kept to a minimum, the statistician may still find the principles and fundamentals presented in this text useful.

Co-Evolution of Standards in Innovation Systems Stefan N. Grösser, 2012-07-27 Mitigating climate change is one of the most profound challenges facing humankind In industrialized countries the residential housing sector produces roughly one fourth of the greenhouse gas emissions One solution to reduce these emissions is the availability of building codes that require high levels of energy efficiency Given the current scientific knowledge more research is needed to gain a proper systemic understanding of the underlying socio economic and technical system Such an understanding is crucial for developing high energy efficiency standards because this system develops gradually over time and cannot be changed swiftly This book creates a feedback rich simulation model for analyzing the effects of different administrative policies on energy demand the improvement of energy efficiency by means of building codes and reductions in the greenhouse gas emissions The dynamic model can contribute substantially to the discourse on energy policies and guide effective administrative interventions The book will be a valuable resource for officials in the public energy administration as well as researchers in the areas of innovation diffusion processes co evolution standardization and simulation modelling Scientific and Technical Aerospace Reports ,1995
