New-Product Diffusion Models Vijay Mahajan, Eitan Muller, Yoram Wind, 2000-09-30 Product sales especially for new products are influenced by many factors These factors are both internal and external to the selling organization and are both controllable and uncontrollable Due to the enormous complexity of such factors it is not surprising that product failure rates are relatively high Indeed new product failure rates have variously been reported as between 40 and 90 percent Despite this multitude of factors marketing researchers have not been deterred from developing and designing techniques to predict or explain the levels of new product sales over time The proliferation of the internet the necessity of developing a road map to plan the launch and exit times of various generations of a product and the shortening of product life cycles are challenging firms to investigate market penetration or innovation diffusion models These models not only provide information on new product sales over time but also provide insight on the speed with which a new product is being accepted by various buying groups such as those identified as innovators early adopters early majority late majority and laggards New Product Diffusion Models aims to distill synthesize and integrate the best thinking that is currently available on the theory and practice of new product diffusion models This state of the art assessment includes contributions by individuals who have been at the forefront of

developing and applying these models in industry The book's twelve chapters are written by a combined total of thirty two experts who together represent twenty five different universities and other organizations in Australia Europe Hong Kong Israel and the United States The book will be useful for researchers and students in marketing and technological forecasting as well as those in other allied disciplines who study relevant aspects of innovation diffusion Practitioners in high tech and consumer durable industries should also gain new insights from New Product Diffusion Models The book is divided into five parts I Overview II Strategic Global and Digital Environments for Diffusion Analysis III Diffusion Models IV Estimation and V Applications and Software The final section includes a PC based software program developed by Gary L Lilien and Arvind Rangaswamy 1998 to implement the Bass diffusion model A case on high definition television is included to illustrate the various features of the software A free 15 day trial access period for the updated software can be downloaded from <http://www.mktgeng.com/diffusionbook> Among the book's many highlights are chapters addressing the implications posed by the internet globalization and production policies upon diffusion of new products and technologies in the population
