the African Union's Agenda 2063 at all levels: continental, regional, national and local      **Scaling up Nature-based Solutions to Tackle Water-related Climate Risks: Insights from Mexico and the United Kingdom** OECD, 2021-04-20

This report provides an assessment of the use of and recommendations for scaling up Nature-based Solutions to address water-related climate risks      **Ecosystem Functions and Management** Harpinder Sandhu, 2017-03-21 This is the first book to provide vital information on key local ecosystems: their functions, state of health and their role in development in an Asian context, particularly on the Indian subcontinent. It addresses six major ecosystems on the Indian subcontinent: mountain, rural, desert, forest, urban and freshwater, and discusses their functions, how they support livelihoods and the economy, the impacts on ecosystem services and management issues. Asia is home to nearly one-third of the global population. With massive industrialization occurring at an increasing pace to support the lifestyles of a growing population, impacts on natural ecosystems are inevitable in this region. The book also explores the concepts, theory and practice regarding these key ecosystems by linking them with the livelihoods of a large population base and subsequently illustrating their importance for sustainable development in the region. Further, by suggesting policies and ways in which these systems can be maintained and enhanced, it facilitates better management of natural resources within the ecological constraints to achieve socio-economic objectives and move towards a green economy for sustainable and equitable development in the region.

*Valuation of Regulating Services of Ecosystems* Pushpam Kumar, Michael D. Wood, 2010-07-13 The valuation of regulating services is an evolving field of ecological economics. In this book, Professor Pushpam Kumar and Professor Michael D. Wood have invited some of the foremost international experts in the field of ecosystem services valuation to contribute chapters on the valuation of regulating services and highlight some of the main obstacles to the implementation and acceptance of these methodologies in the context of decision making      Reengineering Library Services, 2005      **Natural Capital** Peter Kareiva, 2011-04-07 In 2005, The Millennium Ecosystem Assessment (MA) provided the first global assessment of the world's ecosystems and ecosystem services. It concluded that recent trends in ecosystem change threatened human wellbeing due to declining ecosystem services. This bleak prophecy has galvanized conservation organizations, ecologists and economists to work toward rigorous valuations of ecosystem services at a spatial scale and with a resolution that can inform public policy. The editors have assembled the world's leading scientists in the fields of conservation policy analysis and resource economics to provide the most intensive and best technical analyses of ecosystem services to date. A key idea that guides the science is that the modelling and valuation approaches being developed should use data that are readily available around the world. In addition, the book documents a toolbox of ecosystem service mapping, modeling and valuation models that both The Nature Conservancy and the World Wildlife Fund for Nature (WWF) are beginning to apply around the world as they transform conservation from a biodiversity-only to a people and ecosystem services agenda. The book addresses land, freshwater and marine systems at a variety of spatial scales and includes discussion of how to treat both climate change and cultural values.

when examining tradeoffs among ecosystem services

*IMPACT OF CLIMATE CHANGE ON GLOBAL SUSTAINABILITY  
INTERDISCIPLINARY PERSPECTIVES AND SOLUTIONS* Dr.M.Tamilselvi,Dr.B.Winmayil, Sustainability is no longer about doing less harm It s about doing more good Jochen Zeitz Climate change refers to long term shifts in temperature weather patterns and environmental conditions on Earth While some changes occur naturally human activities such as burning fossil fuels coal oil and gas deforestation and industrial processes have significantly increased greenhouse gas emissions trapping heat in the atmosphere and causing global warming Climate change is not merely an environmental crisis but a profound challenge to global sustainability affecting ecosystems economies and human societies Rising temperatures extreme meteorological phenomena and biodiversity loss threaten the very foundation of life on Earth Combating climate change requires a collective effort from individuals communities businesses and governments One of the most crucial solutions is reducing carbon emissions by shifting to renewable energy sources such as solar and wind power Sustainable agriculture and forestry practices including forest conservation and eco friendly farming also play a vital role in preserving biodiversity and maintaining ecological balance Improving energy efficiency in homes industries and transportation helps lower energy consumption and reduce greenhouse gas emissions On a global scale international policies and agreements such as the Paris Agreement encourage countries to collaborate in limiting temperature rise and mitigating climate impacts Additionally raising public awareness and promoting individual actions such as reducing waste using public transport and supporting climate friendly policies are essential steps in fostering a more sustainable future When people make conscious choices about what they consume how they travel and the waste they generate it contributes to a larger shift towards sustainability The power of individual action lies in its ability to inspire others and create a ripple effect that leads to widespread change For instance in August 2018 at the age of 15 Thunberg began protesting outside the Swedish parliament demanding it to take action to address climate change by adhering to the Paris Agreement and reducing greenhouse gas emissions for keeping global temperature rise below 1.5 C Initially a solitary act her protest inspired millions of young people across the globe to join the movement creating the Fridays for Future movement Through legislation carbon pricing and the promotion of renewable energy sources governments can drive large scale environmental change The Danish government has been a global leader in promoting sustainability through comprehensive policies and actions
