Data Mining: Foundations and Practice Tsau Young Lin, Ying Xie, Anita Wasilewska, Churn-Jung Liao, 2008-08-20 The IEEE ICDM 2004 workshop on the Foundation of Data Mining and the IEEE ICDM 2005 workshop on the Foundation of Semantic Oriented Data and Web Mining focused on topics ranging from the foundations of data mining to new data mining paradigms The workshops brought together both data mining researchers and practitioners to discuss these two topics while seeking solutions to long standing data mining problems and stimulating new data mining research directions We feel that the papers presented at these workshops may encourage the study of data mining as a scientific field and spark new communications and collaborations between researchers and practitioners

To express the visions forged in the workshop to a wider range of data mining researchers and practitioners and foster active participation in the study of foundations of data mining we edited this volume by involving extended and updated versions of selected papers presented at those workshops as well as some other relevant contributions The content of this book includes studies of foundations of data mining from theoretical practical algorithmical and managerial perspectives The following is a brief summary of the papers contained in this book

Granular, Fuzzy, and Soft Computing Tsau-Young Lin, Churn-Jung Liao, Janusz Kacprzyk, 2023-03-29 The first edition of the Encyclopedia of Complexity and Systems Science ECSS 2009 presented a comprehensive overview of granular computing GrC broadly divided into several categories Granular computing from rough set theory Granular Computing in Database Theory Granular Computing in Social Networks Granular Computing and Fuzzy Set Theory Grid Cloud Computing as well as general issues in granular computing In 2011 the formal theory of GrC was established providing an adequate infrastructure to support revolutionary new approaches to computer data science including the challenges presented by so called big data For this volume of ECSS Second Edition many entries have been updated to capture these new developments together with new chapters on such topics as data clustering outliers in data mining qualitative fuzzy sets and information flow analysis for security applications Granulations can be seen as a natural and ancient methodology deeply rooted in the human mind Many daily things are routinely granulated into sub things The topography of earth is granulated into hills plateaus etc space and time are granulated into infinitesimal granules and a circle is granulated into polygons of infinitesimal sides Such granules led to the invention of calculus topology and non standard analysis Formalization of general granulation was difficult but as shown in this volume great progress has been made in combining discrete and continuous mathematics under one roof for a broad range of applications in data science

Foundation of Research Methodology- Theory and Practices M Sathyan, Thaimanavan K T R, Dr. S Mahalakshmi, Adharsh J, 2024-11-14 Foundation of Research Methodology Theory and Practices is an essential guide to understanding the theoretical underpinnings of research methodology The book provides a structured approach to the entire research process offering comprehensive insights into topics such as research design data collection analysis interpretation

and reporting With a focus on the theoretical aspects this book helps students and researchers navigate the complexities of research without relying on case studies examples or numerical data The book is designed to be a practical yet conceptual resource for anyone seeking to understand the fundamental principles of research methodology Each chapter delves into key concepts such as the role of ethics in research the different types of research designs and the tools required for data analysis Special attention is given to the importance of reliability validity and ethical guidelines in conducting rigorous and credible research The text also explores current trends in research methodology such as mixed methods approaches and the integration of technology in research practices This book serves as a reliable companion for those looking to build a solid theoretical foundation in research methodology providing the knowledge necessary to conduct research that is both meaningful and effective

Wierzchoń, 2009-12-24 This is the second volume of a large two volume editorial project we wish to dedicate to the memory of the late Professor Ryszard S Michalski who passed away in 2007 He was one of the fathers of machine learning an exciting and relevant both from the practical and theoretical points of view area in modern computer science and information technology His research career started in the mid 1960s in Poland in the Institute of Automation Polish Academy of Sciences in Warsaw Poland He left for the USA in 1970 and since then had worked there at various universities notably at the University of Illinois at Urbana Champaign and finally until his untimely death at George Mason University We the editors had been lucky to be able to meet and collaborate with Ryszard for years indeed some of us knew him when he was still in Poland After he started working in the USA he was a frequent visitor to Poland taking part at many conferences until his death We had also witnessed with a great personal pleasure honors and awards he had received over the years notably when some years ago he was elected Foreign Member of the Polish Academy of Sciences among some top scientists and scholars from all over the world including Nobel prize winners Professor Michalski's research results influenced very strongly the development of machine learning data mining and related areas Also he inspired many established and younger scholars and scientists all over the world We feel very happy that so many top scientists from all over the world agreed to pay the last tribute to Professor Michalski by writing papers in their areas of research These papers will constitute the most appropriate tribute to Professor Michalski a devoted scholar and researcher Moreover we believe that they will inspire many newcomers and younger researchers in the area of broadly perceived machine learning data analysis and data mining The papers included in the two volumes Machine Learning I and Machine Learning II cover diverse topics and various aspects of the fields involved For convenience of the potential readers we will now briefly summarize the contents of the particular chapters

Computer and Information Science Roger Lee, 2008-04-30 The 7th IEEE ACIS Conference and the 2nd IEEE ACIS Workshop on e Activity IWEA 2008 featured researchers from around the world The conference organizers selected 23 outstanding papers for this volume of Springer's Studies in Computational Intelligence

Analytics with R Johannes Ledolter, 2013-05-28 Collecting analyzing and extracting valuable information from a large amount of data requires easily accessible robust computational and analytical tools *Data Mining and Business Analytics with R* utilizes the open source software R for the analysis exploration and simplification of large high dimensional data sets As a result readers are provided with the needed guidance to model and interpret complicated data and become adept at building powerful models for prediction and classification Highlighting both underlying concepts and practical computational skills *Data Mining and Business Analytics with R* begins with coverage of standard linear regression and the importance of parsimony in statistical modeling The book includes important topics such as penalty based variable selection LASSO logistic regression regression and classification trees clustering principal components and partial least squares and the analysis of text and network data In addition the book presents A thorough discussion and extensive demonstration of the theory behind the most useful data mining tools Illustrations of how to use the outlined concepts in real world situations Readily available additional data sets and related R code allowing readers to apply their own analyses to the discussed materials Numerous exercises to help readers with computing skills and deepen their understanding of the material *Data Mining and Business Analytics with R* is an excellent graduate level textbook for courses on data mining and business analytics The book is also a valuable reference for practitioners who collect and analyze data in the fields of finance operations management marketing and the information sciences Statistical Implicative Analysis Régis Gras, Einoshin Suzuki, Fabrice Guillet, Filippo

Spagnolo, 2008-04-29 Statistical implicative analysis is a data analysis method created by Rgis Gras almost thirty years ago which has a significant impact on a variety of areas ranging from pedagogical and psychological research to data mining Statistical implicative analysis SIA provides a framework for evaluating the strength of implications such implications are formed through common knowledge acquisition techniques in any learning process human or artificial This new concept has developed into a unifying methodology and has generated a powerful convergence of thought between mathematicians statisticians psychologists specialists in pedagogy and last but not least computer scientists specialized in data mining This volume collects significant research contributions of several rather distinct disciplines that benefit from SIA Contributions range from psychological and pedagogical research bioinformatics knowledge management and data mining **Trust,**

Privacy and Security in Digital Business Steven Furnell, Costas Lambrinoudakis, Günther Pernul, 2011-08-19 This book constitutes the refereed proceedings of the 8th International Conference on Trust and Privacy in Digital Business TrustBus 2011 held in Toulouse France in August September 2011 in conjunction with DEXA 2011 The 18 revised full papers presented were carefully reviewed and selected from numerous submissions The papers are organized in the following topical sections identity and trust management security and privacy models for pervasive information systems reliability and security of content and data authentication and authorization in digital business intrusion detection and information filtering management of privacy and confidentiality and cryptographic protocols usability of security Computational Intelligence

for Remote Sensing Manuel Grana, Richard J. Duro, 2008-06-05 This book is a composition of different points of view regarding the application of Computational Intelligence techniques and methods to Remote Sensing data and applications. It is the general consensus that classification, its related data processing and global optimization methods are core topics of Computational Intelligence. Much of the content of the book is devoted to image segmentation and recognition using diverse tools from different areas of the Computational Intelligence field ranging from Artificial Neural Networks to Markov Random Field modeling. The book covers a broad range of topics starting from the hardware design of hyperspectral sensors and data handling problems, namely data compression and watermarking issues, as well as autonomous web services. The main contents of the book are devoted to image analysis and efficient parallel implementations of these analysis techniques. The classes of images dealt with throughout the book are mostly multispectral and hyperspectral images, though there are some instances of processing Synthetic Aperture Radar images.

Design and Analysis of Learning Classifier Systems Jan Drugowitsch, 2008-05-30 This book is probably best summarized as providing a principled foundation for Learning Classifier Systems. Something is happening in LCS and particularly XCS and its variants that clearly often produces good results. Jan Drugowitsch wishes to understand this from a broader machine learning perspective and thereby perhaps to improve the systems. His approach centers on choosing a statistical definition derived from machine learning of a good set of classifiers based on a model according to which such a set represents the data. For an illustration of this approach, he designs the model to be close to XCS and tests it by evolving a set of classifiers using that definition as a fitness criterion, seeing if the set provides a good solution to two different function approximation problems. It appears to me that in some sense his definition of a good set of classifiers also, in his terms, captures the essence in machine learning terms of what XCS is doing. In the process of designing the model, the author describes its components and their training in clear detail and links it to currently used LCS, giving rise to recommendations for how those LCS can directly gain from the design of the model and its probabilistic formulation. The seeming complexity of evaluating the quality of a set of classifiers is alleviated by giving an algorithmic description of how to do it, which is carried out via a simple Pittsburgh-style LCS.

Adaptive and Multilevel Metaheuristics Carlos Cotta, 2008-05-29 This cutting edge volume presents recent advances in the area of adaptiveness in metaheuristic optimization. It includes up-to-date reviews of hyperheuristics and self-adaptation in evolutionary algorithms.
