Decentralized Applications Harnessing Bitcoins Blockchain Technology:

Decentralized Applications Siraj Raval, 2016-07-18 Take advantage of Bitcoin's underlying technology the blockchain to build massively scalable decentralized applications known as dapps. In this practical guide author Siraj Raval explains why dapps will become more widely used and profitable than today's most popular web apps. You'll learn how the blockchain's cryptographically stored ledger, scarce asset model, and peer-to-peer P2P technology provide a more flexible, better incentivized structure than current software models. Once you understand the theory behind dapps and what a thriving dapp ecosystem looks like, Raval shows you how to use existing tools to create a working dapp. You'll then take a deep dive into the OpenBazaar decentralized market and examine two case studies of successful dapps currently in use. Learn advances in distributed system technology that make distributed data, wealth, identity, computing, and bandwidth possible. Build a Twitter clone with the Go language distributed architecture, decentralized messaging app, and peer-to-peer data store. Learn about OpenBazaar's decentralized market and its structure for supporting transactions. Explore Lighthouse, a decentralized crowdfunding project that rivals sites such as Kickstarter and IndieGoGo. Take an in-depth look at La Zooz, a P2P ridesharing app that transmits data directly between riders and drivers.

Blockchain Technology: Applications and Challenges Sandeep Kumar Panda, Ajay Kumar Jena, Santosh Kumar Swain, Suresh Chandra Satapathy, 2021-04-30 This book discusses the various open issues of blockchain technology such as the efficiency of blockchain in different domains of digital cryptocurrency, smart contracts, smart education system, smart cities, cloud identity, and access safeguard to cybersecurity and health care. For the first time in human history, people across the world can trust each other and transact over a large peer-to-peer network without any central authority. This proves that trust can be built not only by centralized institutions but also by protocols and cryptographic mechanisms. The potential and collaboration between organizations and individuals within peer networks make it possible to potentially move to a global collaborative network without centralization. Blockchain is a complex social, economic, and technological phenomenon. This questions what the established terminologies of the modern world like currency, trust, economics, and exchange would mean. To make any sense, one needs to realize how much insightful and potential it is in the context and the way it is technically developed. Due to rapid changes in accessing the documents through online transactions and transferring the currency online, many previously used methods are proving insufficient and not secure to solve the problem which arises in the safe and hassle-free transaction. Nowadays, the world changes rapidly, and a transition flow is also seen in Business Process Management (BPM). The traditional Business Process Management holds good establishment last one to two decades, but the internal workflow confined in a single organization. They do not manage the workflow process and information across organizations. If they do so, again fall in the same trap as the control transfers to the third party that is centralized server, and it leads to tampering the data and single point of failure. To address these issues, this book highlights a number of unique problems and effective solutions that reflects the state of the art in blockchain.

Philosophy of Blockchain Technology - Ontologies Nicolae Sfetcu, 2019 About the necessity and usefulness of developing a philosophy specific to the blockchain technology emphasizing on the ontological aspects After an Introduction that highlights the main philosophical directions for this emerging technology in Blockchain Technology I explain the way the blockchain works discussing ontological development directions of this technology in Designing and Modeling The next section is dedicated to the main application of blockchain technology Bitcoin with the social implications of this cryptocurrency There follows a section of Philosophy in which I identify the blockchain technology with the concept of heterotopia developed by Michel Foucault and I interpret it in the light of the notational technology developed by Nelson Goodman as a notational system In the Ontology section I present two developmental paths that I consider important Narrative Ontology based on the idea of order and structure of history transmitted through Paul Ricoeur's narrative history and the Enterprise Ontology system based on concepts and models of an enterprise specific to the semantic web and which I consider to be the most well developed and which will probably become the formal ontological system at least in terms of the economic and legal aspects of blockchain technology In Conclusions I am talking about the future directions of developing the blockchain technology philosophy in general as an explanatory and robust theory from a phenomenologically consistent point of view which allows testability and ontologies in particular arguing for the need of a global adoption of an ontological system for develop cross cutting solutions and to make this technology profitable

Applications of Blockchain Technology in E-Business Value Chains Josepha Witt, 2025-06-13 Blockchain Technology (BCT) is explored as a substantial part of the next generation of the Internet affecting business models in e-business. This book explores the application of BCT in e-business focusing on the value creation. The research objective is to examine how and why BCT is used in e-business value chains. This objective is reached through a pragmatic multimethod approach combining four studies. Study 1 summarises the state of the art of approaches to assess a BCT fit for a particular scenario and outlines shortcomings resulting from these approaches. Study 2 provides empirical insights into the usage of BCT in four e-business value chains based on the cases Theta content, OpenBazaar commerce, Presearch context, and Crypviser connection. Study 3 deepens the insights in the e-commerce value chain. By means of a qualitative content analysis of news articles, various BCT application domains for each e-commerce activity are presented. Study 4 narrows the perspective of analysis to e-negotiations, proposes a BC-based negotiation support system, and examines its opportunities and challenges. Finally, an integrative discussion of the findings results in two explanations how BCT is
