Dell Latitude E5420:

Model-Driven Engineering Languages and Systems Juergen Dingel, Wolfram Schulte, Isidro Ramos, Silvia Abrahao, Emilio Insfran, 2014-09-19 This book constitutes the refereed proceedings of the 17th International Conference on Model Driven Engineering Languages and Systems MODELS 2014 held in Valencia Spain in September October 2014 The 41 full papers presented in this volume were carefully reviewed and selected from a total of 126 submissions The scope of the conference series is broad encompassing modeling languages methods tools and applications considered from theoretical and practical angles and in academic and industrial settings The papers report on the use of modeling in a wide range of cloud mobile and web computing model transformation behavioral modeling MDE past present future formal semantics specification and verification models at runtime feature and variability modeling composition and adaptation practices and experience modeling for analysis pragmatics model extraction manipulation and persistence querying and reasoning **Automated Technology for Verification and Analysis** Étienne André, Jun Sun, 2023-10-18 This book constitutes the refereed proceedings of the 21st International Symposium on Automated Technology for Verification and Analysis ATVA 2023 held in Singapore in October 2023 The symposium intends to promote research in theoretical and practical aspects of automated analysis verification and synthesis by providing a forum for interaction between regional and international research communities and industry in related areas The 30 regular papers presented together with 7 tool papers were carefully reviewed and selected from 150 submissions The papers are divided into the following topical sub headings Temporal logics Data structures and heuristics Verification of programs and hardware Promoting Manual Dexterity Recovery After Stroke Martin Lotze, Pål G. Lindberg, 2019-11-20 **Ingenious Crafts** Pasquale De Marco, 2025-04-09 In a world awash with products industrial product design stands as a beacon of innovation where creativity functionality and aesthetics converge to shape the objects that define our daily lives This comprehensive guide unlocks the secrets of this fascinating field taking readers on a journey through the minds of designers the materials and technologies that bring products to life and the intricate processes that ensure their quality and performance From the sleek contours of a smartphone to the intricate mechanisms of a medical device industrial products are more than mere commodities they are embodiments of human ingenuity problem solving and artistic expression This book delves into the historical evolution of design thinking tracing the lineage of ideas and innovations that have shaped the field It explores the interplay between aesthetics and functionality revealing the design principles that guide the creation of products that are both visually appealing and effective in use Furthermore this guide investigates the integral role of materials and manufacturing processes in the realization of industrial products It examines the properties and applications of various materials from traditional metals and plastics to advanced composites and sustainable alternatives It also explores the diverse manufacturing techniques employed to transform these materials into tangible products from traditional methods like CNC machining to cutting edge technologies like 3D printing

Beyond the technical aspects this book delves into the human centered dimensions of industrial product design It emphasizes the importance of understanding user needs and preferences ensuring that products are tailored to the people who use them It discusses the role of ergonomics and human factors in creating products that are comfortable and easy to use Enriched with captivating case studies this book brings the world of industrial product design to life These case studies showcase products that have revolutionized industries improved lives and pushed the boundaries of what is possible They serve as tangible examples of the principles and concepts discussed throughout the book providing readers with a deeper understanding of the creative minds that bring these products into being Whether you are a seasoned designer an aspiring entrepreneur or simply someone fascinated by the world of industrial product design this book offers a comprehensive and engaging exploration of this dynamic field It is an indispensable resource for anyone seeking to understand the art and science behind the products that shape our lives If you like this book write a review

Neural and Computational Modeling of Movement Control Ning Lan, Vincent C. K. Cheung, Simon C. Gandevia, 2017-04-17 In the study of sensorimotor systems an important research goal has been to understand the way neural networks in the spinal cord and brain interact to control voluntary movement Computational modeling has provided insight into the interaction between centrally generated commands proprioceptive feedback signals and the biomechanical responses of the moving body Research in this field is also driven by the need to improve and optimize rehabilitation after nervous system injury and to devise biomimetic methods of control in robotic devices This research topic is focused on efforts

dedicated to identify and model the neuromechanical control of movement Neural networks in the brain and spinal cord are known to generate patterned activity that mediates coordinated activation of multiple muscles in both rhythmic and discrete movements e g locomotion and reaching Commands descending from the higher centres in the CNS modulate the activity of spinal networks which control movement on the basis of sensory feedback of various types including that from proprioceptive afferents The computational models will continue to shed light on the central strategies and mechanisms of sensorimotor control and learning This research topic demonstrated that computational modeling is playing a more and more prominent role in the studies of postural and movement control With increasing ability to gather data from all levels of the neuromechanical sensorimotor systems there is a compelling need for novel creative modeling of new and existing data sets because the more systematic means to extract knowledge and insights about neural computations of sensorimotor systems from these data is through computational modeling While models should be based on experimental data and validated with experimental evidence they should also be flexible to provide a conceptual framework for unifying diverse data sets to generate new insights of neural mechanisms to integrate new data sets into the general framework to validate or refute hypotheses and to suggest new testable hypotheses for future experimental investigation It is thus expected that neural and computational modeling of the sensorimotor system should create new opportunities for experimentalists and modelers to collaborate in a joint endeavor to advance our understanding of the neural mechanisms for postural and movement control The editors would like to thank Professor Arthur Prochazka who helped initially to set up this research topic and all authors who contributed their articles to this research topic Our appreciation also goes to the reviewers who volunteered their time and effort to help achieve the goal of this research topic We would also like to thank the staff members of editorial office of Frontiers in Computational Neuroscience for their expertise in the process of manuscript handling publishing and in bringing this ebook to the readers The support from the Editor in Chief Dr Misha Tsodyks and Dr Si Wu is crucial for this research topic to come to a successful conclusion We are indebted to Dr Si Li and Ms Ting Xu whose assistant is important for this ebook to become a reality Finally this work is supported in part by grants to Dr Ning Lan from the Ministry of Science and Technology of China 2011CB013304 the Natural Science Foundation of China No 81271684 No 61361160415 No 81630050 and the Interdisciplinary Research Grant cross Engineering and Medicine by Shanghai Jiao Tong University YG20148D09 Dr Vincent Cheung is supported by startup funds from the Faculty of Medicine of The Chinese University of Hong Kong Guest Associate Editors Ning Lan Vincent Cheung and Simon Gandevia
