Optimierung Kurt Littger, 2013-03-09 Optimierung ist eine Aufgabe von besonderer Bedeutung für Unternehmen und Organisationen. Durch wachsenden Wettbewerb wird dieses Thema immer wichtiger. Hier wird es in einer Darstellungsform behandelt, die den Praktiker ohne große mathematische Vorkenntnisse in dieses komplexe Sachgebiet einführt. Hierbei werden theoretische, algorithmische Aspekte konzeptionell behandelt und in Beziehung zu Aspekten der Datenverarbeitung, Software sowie zu den Anwendungsgebieten gestellt, wie z. B. Standort, Personal, Produktions- und Vertriebsplanung von Unternehmen. Das Buch führt den Leser von den klassischen Methoden und Anwendungen bis zu den neuesten Verfahren und Problemstellungen betriebswirtschaftlicher und technischer Art. Es trägt dazu bei, dem großen Interessentenkreis aus den verschiedensten Branchen den Blick für die Möglichkeiten des rechnergestützten Optimierens zu öffnen. Von besonderem Wert für den Leser ist der einführende Charakter der Darstellung und das reichhaltige, strukturierte Literaturverzeichnis.

The Mathematics Student, 1966 *Handbook of Number Theory II* J. Sándor, B. Crstici, 2004. This handbook focuses on some important topics from Number Theory and Discrete Mathematics. These include the sum of divisors function with the many old and new issues on Perfect numbers, Euler's totient and its many facets, the Möbius function along with its generalizations, extensions and applications, the arithmetic functions related to the divisors or the digits of a number, the Stirling, Bell, Bernoulli, Euler and Eulerian numbers with connections to various fields of pure or applied mathematics. Each chapter is a survey and can be viewed as an encyclopedia of the considered field, underlining the interconnections of Number Theory with Combinatorics, Numerical mathematics, Algebra or Probability Theory. This reference work will be useful to specialists in number theory and discrete mathematics as well as mathematicians or scientists who need access to some of these results in other fields of research.

Integer Programming and Related Areas C. Kastning, 2013-11-11 Integer Programming is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut für Konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl Math Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries

Integer Programming and Related Areas Rabe v. Randow, 2012-12-06 The fields of integer programming and combinatorial optimization continue to be areas of great vitality with an ever increasing number of publications and journals appearing A classified bibliography thus continues to be necessary and useful today even more so than it did when the project of which this is the fifth volume was started in 1970 in the Institut für Ökonometrie und Operations Research of the University of Bonn The pioneering first volume was compiled by Claus Kastning during the years 1970 1975 and appeared in 1976 as Volume 128 of the series Lecture Notes in Economics and Mathematical Systems published by the Springer Verlag Work on the project was continued by Dirk Hausmann Reinhardt Euler and Rabe von Randow and resulted in the publication of the second third and fourth volumes in 1978 1982 and 1985 Volumes 160 197 and 243 of the above series The present book constitutes the fifth volume of the bibliography and covers the period from autumn 1984 to the end of 1987 It contains 5864 new publications by 4480 authors and was compiled by Rabe von Randow Its form is practically identical to that of the first four volumes some additions having been made to the subject list
