Book Description There are many applications that use data science and analytics to gain insights from terabytes of data. These apps, however, do not address the challenge of continually discovering patterns for IoT data. In *Hands On Artificial Intelligence for IoT*, we cover various aspects of artificial intelligence (AI) and its implementation to make your IoT solutions smarter. This book starts by covering the process of gathering and preprocessing IoT data gathered from distributed sources. You will learn different AI techniques such as machine learning, deep learning, reinforcement learning, and natural language processing to build smart IoT systems. You will also leverage the power of AI to handle real-time data coming from wearable devices. As you progress through the book, techniques for building models that work with different kinds of data generated and consumed by IoT devices such as time series, images, and audio will be covered. Useful case studies on four major application areas of IoT solutions are a key focal point of this book. In the concluding chapters, you will leverage the power of widely used Python libraries TensorFlow and Keras to build different kinds of smart AI models. By the end of this book, you will be able to build smart AI-powered IoT apps with confidence. What you will learn:

- Apply different AI techniques including machine learning and deep learning using TensorFlow and Keras.
- Access and process data from various distributed sources.
- Perform supervised and unsupervised machine learning for IoT data.
- Implement distributed processing of IoT data over Apache Spark using the MLlib and H2O AI platforms.
- Forecast time series data using deep learning methods.
- Implementing AI from case studies in Personal IoT, Industrial IoT, and Smart Cities.
- Gain unique insights from data obtained from wearable devices and smart devices.

Who this book is for: If you are a data science professional or a machine learning developer looking to build smart systems for IoT, *Hands On Artificial Intelligence for IoT* is for you. If you want to learn how popular artificial intelligence (AI) techniques can be used in the Internet of Things domain, this book will also be of benefit. A basic understanding of machine learning concepts will be required to get the best out of this book.

The Art of Feature Engineering Pablo Duboue, 2020-06-25. A practical guide for data scientists who want to improve the performance of any machine learning solution with feature engineering.

R for Everyone Jared P. Lander, 2013-12-20. Statistical Computation for Programmers, Scientists, Quants, Excel Users, and Other Professionals. Using the open-source R language, you can build powerful statistical models to answer many of your most challenging questions. R has traditionally been difficult for non-statisticians to learn, and most R books assume far too much knowledge to be of help. *R for Everyone* is the solution. Drawing on his unsurpassed experience teaching new users, professional data scientist Jared P. Lander has written the perfect tutorial for anyone new to statistical programming and modeling. Organized to make learning easy and intuitive, this guide focuses on the 20 percent of

R functionality you'll need to accomplish 80 percent of modern data tasks. Lander's self-contained chapters start with the absolute basics, offering extensive hands-on practice and sample code. You'll download and install R, navigate and use the R environment, master basic program control, data import and manipulation, and walk through several essential tests. Then, building on this foundation, you'll construct several complete models, both linear and nonlinear, and use some data mining techniques. By the time you're done, you won't just know how to write R programs; you'll be ready to tackle the statistical problems you care about most.

COVERAGE INCLUDES Exploring R, RStudio, and R packages; Using R for math, variable types, vectors, calling functions, and more; Exploiting data structures, including data frames, matrices, and lists; Creating attractive, intuitive statistical graphics; Writing user-defined functions; Controlling program flow with if, ifelse, and complex checks; Improving program efficiency with group manipulations; Combining and reshaping multiple datasets; Manipulating strings using R's facilities and regular expressions; Creating normal, binomial, and Poisson probability distributions; Programming basic statistics, mean, standard deviation, and t tests; Building linear, generalized linear, and nonlinear models; Assessing the quality of models and variable selection; Preventing overfitting using the Elastic Net and Bayesian methods; Analyzing univariate and multivariate time series data; Grouping data via K means and hierarchical clustering; Preparing reports, slideshows, and web pages with knitr; Building reusable R packages with devtools and Rcpp; Getting involved with the R global community.
