The book shows how the abundance of Linked Data can serve as fertile ground for research and commercial applications. The text focuses on aspects of managing large scale collections of Linked Data. It offers a detailed introduction to L **The Academic Research Enterprise within the Industrialized Nations** National Academy of Engineering, National Academy of Sciences, Institute of Medicine, Government-University-Industry Research Roundtable, 1990-02-01 This report identifies major global trends in scientific research, describes the changes occurring within six industrialized countries in response to these trends, and discusses the challenges facing these countries in the future. As IT management has become mission critical to the economies of the developed world, our technical program has grown in relevance, strength, and quality. Over the next few years, leading IT organizations will gradually move from identifying infrastructure problems to providing business services via automated intelligent management systems. To be successful, these future management systems must provide global scalability for instance to support Grid computing and large numbers of pervasive devices. In Grid environments, organizations can pool desktops and servers dynamically, creating a virtual environment with huge processing power and new management challenges. As the number, type, and criticality of devices connected to the Internet grows, new innovative solutions are required to address this unprecedented scale and management complexity. The growing penetration of technologies such as WLANs introduces new management challenges, particularly for performance and security. Management systems must also support the management of business processes and their supporting technology infrastructure as integrated entities. They will need to significantly reduce the amount of adventitious bootless data thrown at consoles, delivering instead a cogent view of the system state while leaving the handling of lower level events to self-managed multifarious systems and devices. There is a new emphasis on autonomic computing, building systems that can perform routine tasks without administrator intervention and take prescient actions to rapidly recover from potential software or hardware failures Conceptual Modeling - ER 2004 Paolo Atzeni, 2004-10-27 This book constitutes the refereed proceedings of the 23rd International Conference on Conceptual Modeling, ER 2004, held in Shanghai, China, in November 2004. the twenty first century *Big Data, Databases and "Ownership" Rights in the Cloud* Marcelo Corrales

Compagnucci, 2019-11-02 Two of the most important developments of this new century are the emergence of cloud
computing and big data However the uncertainties surrounding the failure of cloud service providers to clearly assert
ownership rights over data and databases during cloud computing transactions and big data services have been perceived as
imposing legal risks and transaction costs This lack of clear ownership rights is also seen as slowing down the capacity of the
Internet market to thrive Click through agreements drafted on a take it or leave it basis govern the current state of the art
and they do not allow much room for negotiation The novel contribution of this book proffers a new contractual model
advocating the extension of the negotiation capabilities of cloud customers thus enabling an automated and machine
readable framework orchestrated by a cloud broker Cloud computing and big data are constantly evolving and transforming
into new paradigms where cloud brokers are predicted to play a vital role as innovation intermediaries adding extra value to
the entire life cycle This evolution will alleviate the legal uncertainties in society by means of embedding legal requirements
in the user interface and related computer systems or its code This book situates the theories of law and economics and
behavioral law and economics in the context of cloud computing and takes database rights and ownership rights of data as
prime examples to represent the problem of collecting outsourcing and sharing data and databases on a global scale It does
this by highlighting the legal constraints concerning ownership rights of data and databases and proposes finding a solution
outside the boundaries and limitations of the law By allowing cloud brokers to establish themselves in the market as entities
coordinating and actively engaging in the negotiation of service level agreements SLAs individual customers as well as small
and medium sized enterprises could efficiently and effortlessly choose a cloud provider that best suits their needs This
approach which the author calls plan like architectures endeavors to create a more trustworthy cloud computing
environment and to yield radical new results for the development of the cloud computing and big data markets **The**

Language Documentation Lenore A. Grenoble, 2010 Language documentation also often called documentary linguistics is a relatively new subfield in linguistics which has emerged in part as a response to the pressing need for collecting describing and archiving material on the increasing number of endangered languages The present book details the most recent developments in this rapidly developing field with papers written by linguists primarily based in academic institutions in North America although many conduct their fieldwork elsewhere The articles in this volume position papers and case studies focus on some of the most critical issues in the field These include 1 the nature of contributions to linguistic theory and method provided by documentary linguistics including the content appropriate for documentation 2 the impact and demands of technology in documentation 3 matters of practice in collaborations among linguists and communities and in the necessary training of students and community members to conduct documentation activities and 4 the ethical issues involved in documentary linguistics
