Gentleman's Magazine ,1892 **Velar fronting in German dialects: A study in synchronic and diachronic phonology** Tracy Alan Hall,2022-11-30 Velar Fronting VF is the name for any synchronic or diachronic phonological process shifting the velar place of articulation to the palatal region of the vocal tract A well known case of VF in Standard German is the rule specifying that the fricative x assimilates to after front segments VF also refers to the change from velar sounds like k g to palatals c The book provides a thorough investigation of VF in German dialects Data are drawn from over 300 original sources for varieties that are or were spoken in Germany Austria Switzerland and other countries VF differs geographically along three parameters A triggers B targets and C outputs VF triggers A are typically defined according to vowel height In some systems VF is induced only by high front vowels in others by high and mid front vowels and in yet others by high mid and low front vowels Some varieties treat consonants r l n as triggers while others do not VF can be nonassimilatory in which case the rule applies even in the context of back segments In many varieties of German VF targets B consist of the two fricatives x but in other dialects the targets comprise x but not In some places VF affects not only x but also velar stops and the velar nasal The output of VF C is typically palatal given the input x but in many other places it is the alveolopalatal A major theme is the way in which VF interacts with synchronic and diachronic changes creating or eliminating structures which can potentially undergo it or trigger it In many dialects the relationship between velars x and palatals is transparent because velars only occur in the back vowel context and palatals only when adjacent to front sounds In that type of system independent processes can either feed VF by creating additional structures which the latter can undergo or they can bleed it by eliminating potential structures to which VF could apply In other dialects VF is opaque In one opaque system both velars x

and palatals surface in the context of front segments Thus in addition to expected front vowel plus palatal sequences i there are also unexpected ones consisting of front vowel plus velar ix In a second type of opaque system velars and palatals are found in the context of back segments hence expected sequences such as i occur in addition to unexpected ones like

Urbanizing the Alps

Fiona Pia,2019-01-14

For plenty years many popular mountain resorts have seen largely uncontrolled development consisting of the multiplication of archetypal chalet style houses This is usually accompanied by roadbuilding for private cars In order to protect these tourist destinations and their natural environs from further uncontrolled development the author investigates different settlement structures such as Andermatt Avoriaz Verbier Zermatt and Whistler Blackcomb On the basis of detailed graphical analyses she develops groundbreaking strategies for urban densification and suitable mobility management which can also be transferred to other tourist areas Switzerland, and the Adjacent Portions of Italy, Savoy, and the Tyrol Karl Baedeker (Firm),1893
