Accounting Information Systems Arline A. Savage,Danielle Brannock,Alicja Foksinska,2025-09 Many students may find it difficult to understand how an accounting information systems AIS course relates to their idea of what an accounting professional does It's not until they enter their careers that they see the value of concepts learned in an AIS course Our goal is to present you with a view of AIS that strongly aligns the concepts in this course with your other accounting coursework while practically preparing you for your future accounting career Current accounting professionals designed this course for future accounting professionals and that means you *Big Data for Big Decisions* Krishna Pera,2022-12-30 Building a data driven organization DDO is an enterprise wide initiative that may consume and lock up resources for the long term

Understandably any organization considering such an initiative would insist on a roadmap and business case to be prepared and evaluated prior to approval This book presents a step by step methodology in order to create a roadmap and business case and provides a narration of the constraints and experiences of managers who have attempted the setting up of DDOs The emphasis is on the big decisions the key decisions that influence 90% of business outcomes starting from decision first and reengineering the data to the decisions process chain and data governance so as to ensure the right data are available at the right time every time Investing in artificial intelligence and data driven decision making are now being considered a survival necessity for organizations to stay competitive While every enterprise aspires to become 100% data driven and every Chief Information Officer CIO has a budget Gartner estimates over 80% of all analytics projects fail to deliver intended value Most CIOs think a data driven organization is a distant dream especially while they are still struggling to explain the value from analytics They know a few isolated successes or a one time leveraging of big data for decision making does not make an organization data driven As of now there is no precise definition for data driven organization or what qualifies an organization to call itself data driven Given the hype in the market for big data analytics and AI every CIO has a budget for analytics but very little clarity on where to begin or how to choose and prioritize the analytics projects Most end up investing in a visualization platform like Tableau or QlikView which in essence is an improved version of their BI dashboard that the organization had invested into not too long ago The most important stakeholders the decision makers are rarely kept in the loop while choosing analytics projects This book provides a fail safe methodology for assured success in deriving intended value from investments into analytics It is a practitioners handbook for creating a step by step transformational roadmap prioritizing the big data for the big decisions the 10% of decisions that influence 90% of business outcomes and delivering material improvements in the quality of decisions as well as measurable value from analytics investments The acid test for a data driven organization is when all the big decisions especially top level strategic decisions are taken based on data and not on the collective gut feeling of the decision makers in the organization
