Logistic Regression From Introductory To Advanced Concepts And Applications:

Logistic Regression Scott W. Menard, 2010 This text begins by showing how logistic regression combines aspects of multiple linear regression and loglinear analysis to overcome problems both techniques have with the analysis of dichotomous dependent variables with continuous predictors It then examines what can go wrong with the model and how to detect and correct it

Logistic Regression Scott Menard, 2009-04-29 In this text author Scott Menard provides coverage of not only the basic logistic regression model but also advanced topics found in no other logistic regression text The book keeps mathematical notation to a minimum making it accessible to those with more limited statistics backgrounds while including advanced topics of interest to more statistically sophisticated readers Not dependent on any one software package the book discusses limitations to existing software packages and ways to overcome them

Key Features Examines the logistic regression model in detail Illustrates concepts with applied examples to help readers understand how concepts are translated into the logistic regression model Helps readers make decisions about the criteria for evaluating logistic regression models through detailed coverage of how to assess overall models and individual predictors for categorical dependent variables Offers unique coverage of path analysis with logistic regression that shows readers how to examine both direct and indirect effects using logistic regression analysis Applies logistic regression analysis to longitudinal panel data helping students understand the issues in measuring change with dichotomous nominal and ordinal dependent variables Shows readers how multilevel change models with logistic regression are different from multilevel growth curve models for continuous interval or ratio scaled dependent variables

Logistic Regression is intended for courses such as Regression and Correlation Intermediate Advanced Statistics and Quantitative Methods taught in departments throughout the behavioral health mathematical and social sciences including applied mathematics statistics biostatistics criminology criminal justice education political science public health epidemiology psychology and sociology

Handbook of Regression Modeling in People Analytics Keith McNulty, 2021-07-30 Despite the recent rapid growth in machine learning and predictive analytics many of the statistical questions that are faced by researchers and practitioners still involve explaining why something is happening Regression analysis is the best swiss army knife we have for answering these kinds of questions This book is a learning resource on inferential statistics and regression analysis It teaches how to do a wide range of statistical analyses in both R and in Python ranging from simple hypothesis testing to advanced multivariate modelling Although it is primarily focused on examples related to the analysis of people and talent the methods easily transfer to any discipline The book hits a sweet spot where there is just enough mathematical theory to support a strong understanding of the methods but with a step by step guide and easily reproducible examples and code so that the methods can be put into practice immediately This makes the book accessible to a wide readership from public and private sector analysts and practitioners to students and researchers Key Features 16 accompanying datasets across a wide range of contexts e.g academic corporate sports marketing Clear step by step instructions on executing the analyses Clear guidance on how to interpret results Primary instruction in R but added sections for Python coders Discussion exercises and data

exercises for each of the main chapters Final chapter of practice material and datasets ideal for class homework or project work

Linear And Nonlinear Optimization Using Spreadsheets: Examples For Prescriptive, Predictive And Descriptive Analytics

Michael J Brusco, Stephanie Stahl, 2024-10-08 The use of spreadsheets to obtain solutions to a diverse array of examples offers a reader friendly way of addressing a topic optimization that can sometimes be viewed as intimidating Many people are readily familiar with spreadsheets and how they work yet are apt to be unaware of the incredible power of Excel for solving some rather complex optimization problems A major goal of the book is to sell readers on why it is so important to understand optimization and a large collection of examples for a wide range of business decision making areas e.g production planning and scheduling workforce planning and scheduling location and supply chain distribution location of emergency services assembly line balancing vehicle routing project scheduling revenue management advertising product design payout schedules productivity measurement investment portfolio management sports league scheduling ranking models etc affords a practical mechanism for achieving that goal Another important contribution of the book is that it provides coverage of the mechanics of some common yet sophisticated statistical methods regression logistic regression discriminant analysis factor analysis and cluster analysis which are often opaque to many users of such methods

Language Acquisition in CLIL and Non-CLIL Settings Verena Möller, 2017-12-15 Language Acquisition in CLIL and Non CLIL Settings builds a bridge between Second Language Acquisition and Learner Corpus Research LCR methodologies to take the evaluation of Content and Language Integrated Learning CLIL to a new level The study innovates in two main ways First it is based on a highly diversified L2 database which includes learner corpus data as well as experimental data from the same learners These linguistic components of the database are complemented with extensive information on learner variables including cognitive and affective factors which are rarely studied in LCR Second the study relies on multifactorial statistical analyses to assess the effectiveness of CLIL itself as well as the impact of the selectivity inherent in the CLIL system which has frequently been ignored The linguistic focus of the study is the English passive which is investigated in CLIL and non CLIL teaching materials and subsequently related to learner output

Dependencies and Mechanisms of Unemployment and Social Involvement Bettina Sonnenberg,2014-03-18 People s involvement in social groups and networks constitutes a resource for societies and individuals More specifically involvement represents the basis upon which social integration takes place and provides access to material and non material goods considered to be rewarding for individuals Despite substantial research suggesting that unemployment triggers social exclusion and social isolation evidence for the causal influence of unemployment on social involvement is limited Past studies typically have relied on research methods that are unable to address causality Using long term panel data from Germany and panel estimation methods Bettina Sonnenberg investigates the causal effects of unemployment on people s social involvement By taking into account selection confounds she shows that findings from cross sectional research are misleading and have advanced inaccurate conclusions regarding the social consequences of unemployment
