Housing for the Millions Koos Bosma, Dorine van

Hoogstraten, Martijn Vos, 2000 Home represents a fundamental value in a person's life. Although many factors pertaining to his housing situation are beyond the occupant's control, he still attempts to create his own domestic domain, the finite center of a world in which he is free to be himself. As long ago as 1961, in his book *Supports*, an alternative to mass housing, John Habraken suggested a completely different approach to mass housing in the Netherlands. In an effort to offer the occupant of a mass-produced dwelling the opportunity to make a personal statement, he introduced the concept of a separation of support and infill. Habraken sees the support structure as the aspect of housing production that represents communal responsibility and the infill as the aspect that stands for individual control. He formulated the support and infill concept to introduce variation and personal authority into millions of dwellings. This alternative was to be put into practice by the Foundation for Architects' Research (SAR), which made Habraken its first director. The ambition of the SAR to radically change the production methods of mass housing led to concepts and rules of play that had repercussions on the entire building cycle, from architectural design to product development. All the achievements, disappointments, successes, and failures involved in the realization of an alternative to traditional housing construction can be discovered in this book. This is the first time that the intellectual heritage of the SAR has been brought together in book form and considered within a broader international perspective. Bookjacket *Frontiers of Civil Engineering and Disaster Prevention and Control Volume 1* Yang Yang, Ali

Rahman, 2023-01-16 *Frontiers of Civil Engineering and Disaster Prevention and Control* is a compilation of selected papers from The 3rd International Conference on Civil Architecture and Disaster Prevention and Control (CADPC 2022) and focuses on the research of architecture and disaster prevention in civil engineering. The proceedings feature the most cutting-edge research directions and achievements related to construction technology and prevention and control of disaster. Subjects in this proceedings include Construction Technology, Seismicity in Civil Engineering, High Rise Building Construction, Disaster Preparedness, and Risk Reduction, Smart Post Disaster Rescue. These proceedings will promote development of civil engineering and risk reduction, resource sharing, flexibility, and high efficiency. Moreover, they promote scientific information interchange between scholars from the top universities, research centers, and high-tech enterprises working all around the world. **Performance Assessment Strategies** Michela Turrin, TU Delft, Architecture and the Built

Environment, 2013-12-23 Using engineering performance evaluations to explore design alternatives during the conceptual phase of architectural design helps to understand the relationships between form and performance and is crucial for developing well-performing final designs. Computer-aided conceptual design has the potential to aid the design team in discovering and highlighting these relationships, especially by means of procedural and parametric geometry to support the generation of geometric design and building performance simulation tools to support performance assessments. However, current tools and methods for computer-aided conceptual design in architecture do not explicitly reveal nor allow for backtracking the relationships between performance and geometry of the design. They currently support post-engineering

rather than the early design decisions and the design exploration process Focusing on large roofs this research aims at developing a computational design approach to support designers in performance driven explorations The approach is meant to facilitate the multidisciplinary integration and the learning process of the designer and not to constrain the process in precompiled procedures or in hard engineering formulations nor to automatize it by delegating the design creativity to computational procedures PAS Performance Assessment Strategies as a method is the main output of the research It consists of a framework including guidelines and an extensible library of procedures for parametric modelling It is structured on three parts Pre PAS provides guidelines for a design strategy definition toward the parameterization process Model PAS provides guidelines procedures and scripts for building the parametric models Explore PAS supports the solutions assessment based on numeric evaluations and performance simulations until the identification of a suitable design solution PAS has been developed based on action research Several case studies have focused on each step of PAS and on their interrelationships The relations between the knowledge available in pre PAS and the challenges of the solution space exploration in explore PAS have been highlighted In order to facilitate the explore PAS phase in case of large solution spaces the support of genetic algorithms has been investigated and the exiting method ParaGen has been further implemented Final case studies have focused on the potentials of ParaGen to identify well performing solutions to extract knowledge during explore PAS and to allow interventions of the designer as an alternative to generations driven solely by coded criteria Both the use of PAS and its recommended future developments are addressed in the thesis
