The second volume of the book focuses on clinical aspects of these tumors. Accordingly, the most important brain and spinal cord tumors are specifically discussed in each chapter based on a rational outlining for all chapters in this volume: Background and epidemiology, genetics, immunology, and molecular biology, histopathology and morphology, imaging, and radiologic features, clinical manifestations, therapeutic approaches, surgical intervention, chemotherapy, and radiotherapy, new therapeutic modalities, follow-up, and prognosis. The chapters of this volume discuss the following pathologies of brain and spinal cord tumors: malignant glioma, benign glioma, meningiomas, and other meningeal tumors, ependymomas, medulloblastomas, pineal tumors, choroid plexus and ventricular tumors, neuroectodermal tumors of CNS, neuroepithelial tumors of CNS, pituitary gland tumors, craniopharyngioma, schwannomas, and nerve sheath tumors, hemangioblastomas, and other vascular originating tumors, brain and spinal tumors of embryonic origin, germ line cell tumors, malignant bone or cartilage originating tumors of brain and spine, benign bone or cartilage originating tumors of brain and spine, brain tumors affecting the orbit, globe, and orbit tumors affecting the brain, CNS lymphomas, metastatic lesions of the brain and spine, malignant spinal tumors, benign spinal tumors, brain and/or spinal cord tumors accompanied with other diseases or syndromes, psychological and psychiatric aspects of brain and spinal cord tumors, a brief explanation on surgical approaches for treatment of different brain tumors.
