Integrated Computer-Aided Design in Automotive Development Hirz Mario, Wilhelm Dietrich, Anton

Gferrer, Johann Lang, 2013-06-22 The automotive industry faces constant pressure to reduce development costs and time while still increasing vehicle quality To meet this challenge engineers and researchers in both science and industry are developing effective strategies and flexible tools by enhancing and further integrating powerful computer aided design technology This book provides a valuable overview of the development tools and methods of today and tomorrow It is targeted not only towards professional project and design engineers but also to students and to anyone who is interested in state of the art computer aided development The book begins with an overview of automotive development processes and the principles of virtual product development Focusing on computer aided design a comprehensive outline of the fundamentals of geometry representation provides a deeper insight into the mathematical techniques used to describe and model geometrical elements The book then explores the link between the demands of integrated design processes and efficient data management Within automotive development the management of knowledge and engineering data plays a crucial role Some selected representative applications provide insight into the complex interactions between computer aided design knowledge based engineering and data management and highlight some of the important methods currently emerging in the field

Semantic Modeling and Interoperability in Product and Process Engineering Yongsheng Ma, 2013-06-06 In the past decade feature based design and manufacturing has gained some momentum in various engineering domains to represent and reuse semantic patterns with effective applicability However the actual scope of feature application is still very limited Semantic Modeling and Interoperability in Product and Process Engineering provides a systematic solution for the challenging engineering informatics field aiming at the enhancement of sustainable knowledge representation implementation and reuse in an open and yet practically manageable scale This semantic modeling technology supports uniform multi facet and multi level collaborative system engineering with heterogeneous computer aided tools such as CAD/CAM CAE and ERP This presented unified feature model can be applied to product and process representation development implementation and management Practical case studies and test samples are provided to illustrate applications which can be implemented by the readers in real world scenarios By expanding on well known feature based design and manufacturing approach Semantic Modeling and Interoperability in Product and Process Engineering provides a valuable reference for researchers practitioners and students from both academia and engineering field
