confront the dismal failure in economics and in finance to understand how an economy or a financial market works given the heterogeneous decision making of many different individual interacting actors Economics has failed in this regard with the naive and often misleading concept of representative agents The author presents many insights on the historical development concepts and errors made by the most illustrious economists in the past This book should be essential readings for any economics students as well as academic researchers and policy makers who should learn to bring back good sense thinking in their impactful decisions Didier Sornette Professor on the Chair of Entrepreneurial Risks at the Swiss Federal Institute of Technology Zurich ETH Zurich

Boxes in each chapter highlight little known and entertaining facts about the economists personal lives that had an influence on their work The fourth edition adds coverage of modern monetary theory the COVID 19 pandemic climate change minimum wage debates Schumpeter and socialism Malthus and immigration and more The Making of Modern Economics is a valuable engaging text for courses in the history of economic thought and political economy International Finance H. Kent Baker (ed.), Leigh A. Riddick, 2013 Understanding the current state of affairs and tools available in the study of international finance is increasingly important as few areas in finance can be divorced completely from international issues International Finance reflects the new diversity of interest in international finance by bringing together a set of chapters that summarizes and synthesizes developments to date in the many and varied areas that are now viewed as having international content The book attempts to differentiate between what is known what is believed and what is still being debated about international finance The survey nature of this book involves tradeoffs that inevitably had to be made in the process given the vast footprint that constitutes international finance No single book can cover everything This book however tries to maintain a balance between the micro and macro aspects of international finance Although each chapter is self contained the chapters form a logical whole that follows a logical sequence The book is organized into five broad categories of interest 1 exchange rates and risk management 2 international financial markets and institutions 3 international investing 4 international financial management and 5 special topics The chapters cover market integration financial crisis and the links between financial markets and development in some detail as they relate to these areas In each instance the contributors to this book discuss developments in the field to date and explain the importance of each area to finance as a field of study Consequently the strategic focus of the book is both broad and narrow depending on the reader s needs The entire book provides a broad picture of the current state of international finance but a reader with more focused interests will find individual chapters illuminating on specific topics *Макроэкономика в 2 ч. Вымятниина, Михаил Пахнин, Кирилл Борисов, 2016-03-01 Patentism Replacing Capitalism Samuel Meng, 2019-05-03 Based on economic knowledge and logical reasoning this book proposes a solution to economic recessions and offers a route for societal change to end capitalism The author starts with a brief review of the history of economics and then questions and rejects the trend of recent decades that has seen econometrics replace economic theory By reviewing the different schools of economic thought and by examining the limitations of existing theories to business cycles and economic growth the author forms a new theory to explain cyclic economic growth According to this theory economic recessions result from innovation scarcity which in turn results from the flawed design of the patent system The author suggests a new design for the patent system and envisions that the new design would bring about large economic and societal changes Under this new patent system the synergy of the patent and capital markets would ensure that economic recessions could be avoided and that the economy would grow at the highest speed *Ecolinguistics* Arran Stibbe, 2015-05-01 The increasingly rapid destruction of

the ecological systems that support life is calling into question some of the fundamental stories that we live by stories of unlimited economic growth of consumerism progress individualism success and the human domination of nature Ecolinguistics shows how linguistic analysis can help reveal the stories we live by open them up to question and contribute to the search for new stories Bringing together the latest ecolinguistic studies with new theoretical insights and practical analyses this book charts a new course for ecolinguistics as an engaged form of critical enquiry Featuring A framework for understanding the theory of ecolinguistics and applying it practically in real life Exploration of diverse topics from consumerism in lifestyle magazines to Japanese nature haiku A comprehensive glossary giving concise descriptions of the linguistic terms used in the book Discourse analysis of a wide range of texts including newspapers magazines advertisements films nonfiction books and visual images This is essential reading for undergraduates postgraduates and researchers working in the areas of Discourse Analysis and Language and Ecology
