

Physiotherapeutic approach of management in mechanically ventilated patient.

Mechanical ventilation (MV) is one of the most common interventions in the intensive care unit (ICU). Physical therapy includes early mobilisation to improve functional outcomes. Physical therapy interventions include passive movements of the extremities for deeply sedated patients, in-bed and out-of-bed mobility, active or passive cycling, neuromuscular electrical stimulation and ambulation.

Chest physiotherapy facilitates removal of retained or profuse airway secretions aiming to reduce airway resistance, optimize lung compliance, and decrease the work of breathing. Multimodality respiratory physiotherapy appeared to reduce mortality in ICU patients.
