Systems IS outsourcing has drawn considerable attention among scientists and practitioners for the past fifteen years. The present book analyses why organizations insource or outsource IS functions specifically the development and maintenance of software applications. Concepts from transaction cost theory, resource based theory, incomplete contracts theory, the theory of planned behaviour and cross cultural research are integrated into a coherent framework that recognizes the economic, strategic and social dimension of the IS sourcing decision. This framework is specified in a research model and empirically tested across countries: Germany versus USA, industries: Machinery versus Finance and IS functions: Application Software Development versus Maintenance using the partial least squares (PLS) approach of structural equation modelling. The book thereby provides theoretically and empirically grounded insights into the reasons and implications of the IS sourcing decision.

Strategies for Sustainable Air Services Development Chrystal Zhang, Kareem Yarde, 2024-12-02 Routes are arguably the most valuable of airline assets. Although widely practised in the industry, the process of developing air connectivity has drawn very limited academic research. However, this book fills in this knowledge gap. *Strategies for Sustainable Air Services Development* unwraps the process of decision making in establishing airlinks from the airline's perspective as well as the roles of various stakeholders including airports, tourism authorities, tourist destination organizations, local investment agencies and regional development agencies. Developed from rigorous academic research and analysis of a myriad of data sources that include interviews, surveys and workshops with industry practitioners, it presents a framework of best practices that will serve as a toolkit and central resource point for industry professionals to initiate and establish airlinks to benefit air travellers and society at large. The first book of its kind, it presents the most comprehensive assessment available to date of all the intricacies involved in developing airlinks. The book will equip senior and middle managers, practitioners, policymakers and students with the practical skills and tools required to develop and design airlinks for the benefit of all stakeholders.
