Management Information System Laudon 10th Edition:

Managing Information Systems David Boddy, Albert Boonstra, Graham Kennedy, 2008 Management Information System stakes a management perspective towards IS identifying the issues of organisation and strategy that managers face as they decide how to respond to technological opportunities. The book draws on extensive research to present a distinct organisational perspective on the management of information systems following the argument that managing successive IS projects as part of a coherent organisational process rather than as isolated technological events will produce an information system that enhances broader strategy. The book also includes many case studies which will enable readers to understand and resolve practical and strategic IS challenges. It is written for students on undergraduate and postgraduate degree programmes or undertaking professional qualifications.

Business Information Systems Paul Bocij, Andrew Greasley, Simon Hickie, 2008 A comprehensive introduction to the technology development and management of business information systems. The book assumes no prior knowledge of IS or IT so that new concepts and terms are defined as clearly as possible with explanations in the text and definitions at the margin. In this fast moving area the book covers both the crucial underpinnings of the subject as well as the most recent business and technology applications. It is written for students on any IS, BIS or MIS course from undergraduate to postgraduate and MBA level within a Business or Computer Science Department.

Management Information Systems, Second Edition KELKAR, S. A., Kelkar S. A., 2009-11-23 It is widely recognized that the knowledge of information systems is very much essential in today's business organizations to survive and prosper. This book in its second edition provides students with a conceptual framework to understand information systems. The focus of information systems irrespective of the level of use of information is on producing quality information needed to facilitate decision making. The objective of this book is to capture the material on information systems and organize it around a framework that offers a current and relevant knowledge based on information system by providing just the adequate amount of material in a concise format. The book is organized in three parts i) Information systems basics ii) Managing with information and iii) Managing information resources. Though the main structure of the second edition remains the same the chapters have been updated and revised as per the recent development in the fields of information technology. Besides this a new chapter is added to explain the concepts like e-business, Customer relationship management, CRM, Enterprise resources and planning, ERP and Supply chain management, SCM comprehensively. Intended for the students of computer applications, BCA and MCA and management, BBA and MBA and the undergraduate students of Computer Science engineering the book is equally useful for the busy professionals who wish to grasp the essentials of management information systems without attending a formal instructional course.
