Biological Wastewater Treatment: Principles, Modeling and Design Guang-Hao Chen, Mark C.M. van Loosdrecht, G.A. Ekama, Damir Brdjanovic, 2020-07-15 The first edition of this book was published in 2008 and it went on to become IWA Publishing's bestseller Clearly there was a need for it because over the twenty years prior to 2008 the knowledge and understanding of

wastewater treatment had advanced extensively and moved away from empirically based approaches to a fundamental first principles approach based on chemistry microbiology physical and bioprocess engineering mathematics and modelling However the quantity complexity and diversity of these new developments was overwhelming for young water professionals particularly in developing countries without readily available access to advanced level tertiary education courses in wastewater treatment For a whole new generation of young scientists and engineers entering the wastewater treatment profession this book assembled and integrated the postgraduate course material of a dozen or so professors from research groups around the world who have made significant contributions to the advances in wastewater treatment This material had matured to the degree that it had been codified into mathematical models for simulation with computers The first edition of the book offered that upon completion of an in depth study of its contents the modern approach of modelling and simulation in wastewater treatment plant design and operation could be embraced with deeper insight advanced knowledge and greater confidence be it activated sludge biological nitrogen and phosphorus removal secondary settling tanks or biofilm systems However the advances and developments in wastewater treatment have accelerated over the past 12 years since publication of the first edition While all the chapters of the first edition have been updated to accommodate these advances and developments some such as granular sludge membrane bioreactors sulphur conversion based bioprocesses and biofilm reactors which were new in 2008 have matured into new industry approaches and are also now included in this second edition The target readership of this second edition remains the young water professionals who will still be active in the field of protecting our precious water resources long after the aging professors who are leading some of these advances have retired The authors all still active in the field are aware that cleaning dirty water has become more complex but that it is even more urgent now than 12 years ago and offer this second edition to help the young water professionals engage with the scientific and bioprocess engineering principles of wastewater treatment science and technology with deeper insight advanced knowledge and greater confidence built on stronger competence

2nd IWA Leading-Edge on Sustainability in Water-Limited Environments M. B. Beck,A. Speers,2006-03-31 This book represents the outcome of the Second IWA Leading Edge Conference held in Sydney Australia in November 2004 Sustainability is a paradoxical concept We know we want to protect the environment from human induced change yet ecosystems are dynamic constantly changing and adapting in response to a multitude of factors the combined effect and subtleties of which are probably well beyond human calculation Furthermore our conscious desire to protect the environment which forces us to think of humans as sitting outside ecosystems conflicts with the unavoidable fact that we are an unconscious actor within those ecosystems We must also recognise that the goal of protecting the environment is not a clear cut objective Perhaps because of its complexity and propensity to change we cannot know what the fully protected environment would look like Individual preferences too make the conceptualisation of an ideal state impossible do we strive for an ecosystem in which we play a minor part barely influencing natural outcomes or one that is more actively managed and provides for our needs or wants Neither this volume nor the conference from which it draws resolve the paradoxes described above The papers presented here do however provide insight into the innovative thinking and practical projects undertaken across the globe that move us from patently unsustainable conditions to those in which our economic activity impact on ecosystems and desire for positive social outcomes are in better balance

Resource Recovery from Wastewater Treatment Giorgio Mannina,Alida Cosenza,Antonio Mineo,2024-06-17 This volume highlights the latest advances innovations and applications in the field of water resource recovery from water treatment as presented by leading researchers at the International Conference on Wider Uptake of Water Resource Recovery from Wastewater Treatment ICWRR held in Palermo Italy on June 18 21 2024 The event took place together with the 7th IWA Regional Membrane Technology Conference IWA RMTC The contributions cover a wide range of themes from innovative and nature based solutions for water and wastewater management to circularity assessment tools and environmental policy and legislation The topics include resource recovery from wastewater wastewater treatment membrane bioreactors greenhouse gases from wastewater treatment LCA water reuse rainwater harvesting mathematical modelling of wastewater treatment plants metagenomics analysis and environmental microbiology environmental policy and legislation in the water sector plant water soil nexus fertilizers from wastewater The contributions were selected by means of a rigorous peer review process and highlight many exciting ideas that will spur novel research directions and foster multidisciplinary collaboration among different water specialists
