Business Process Change Management August-Wilhelm Scheer, Ferri Abolhassan, Wolfram Jost, Mathias Kirchmer, 2012-11-03

Today's business environment is constantly changing. New customer requirements or products, an evolving competition, new IT solutions like EAI or web services, outsourcing opportunities, mergers, acquisitions or changing legal requirements are just a few reasons for this change. Intra and inter enterprise processes of enterprises have to change accordingly. Therefore, organizations have to ensure an efficient and effective business process change management in order to stay competitive and survive on the long term. This is a precondition to achieve and maintain business process excellence. However, the execution of successful change management has been extremely difficult. Many initiatives failed because of an unclear scoping and a missing definition of deliverables. Only the comprehensive design of the business processes to be improved creates a basis for a focused management of change. Change management

can then be handled as a process by itself It becomes measurable and can be controlled It is an integral part of business process lifecycle management Key enabler is the ARIS Toolset which supports all activities of the process and change management Business strategies the resulting process specifications and execution as well as the process controlling are executed by using ARIS tools in the phase of change as well as during the daily operation **IT-gestützte**
