Abandoned Flooded Underground Mines Christian Wolkersdorfer, 2008-02-01 Switching off the pumps of a mine is one of the last steps in the lifetime of a surface or underground mine As the water in the open space raises the water might become contaminated with different pollutants and eventually starts to flow in the open voids This book addresses the processes related to mine abandonment from a hydrogeological perspective After an introduction to the relevant hydrogeochemical processes the book gives detailed information about mine closure procedures Based on in situ measurements the hydrodynamic processes in a flooded mine are described and some of the mine closure flow models exemplified As all investigations base on precise data the book gives some key issues of monitoring and sampling especially flow monitoring Then the book shows some new methodologies for conducting tracer tests in flooded mines and gives some hints to passive mine water treatment At the end 13 well investigated case studies of flooded underground mine and mine water tracer tests are described and interpreted from a hydrodynamic point of view Resource Management for Sustainable Agriculture

Vikas Abrol, Peeyush Sharma, 2012-10-24 In this book papers pertaining to resource management for sustainable agricultural development are presented in four parts divided into ten chapters Part I discusses the usage of water and waste management for sustainable agricultural development including aspects like irrigation management to prevent soil and ground water salinization production of solid fuel from oil palm waste sustainable ecomaterials and biorefinery from agroindustrial waste nonpoint pollution from agriculture and livestock activities on surface water Part II discusses sustainable management of dryland resources especially carbon sequestration under changing climate scenario Part III deals with efficient nutrient management for sustainable crop productivity in different agro climatic conditions soil quality and productivity improvement

under rainfed conditions Part IV throws light upon effect of conservation tillage on soil properties and impact of agricultural traffic and tillage on soil properties

Mine Water Paul L. Younger, S.A. Banwart, Robert S. Hedin, 2012-12-06 Nowhere is the conflict between economic progress and environmental quality more apparent than in the mineral extraction industries The latter half of the 20th century saw major advances in the reclamation technologies However mine water pollution problems have not been addressed In many cases polluted mine water long outlives the life of the mining operation As the true cost of long term water treatment responsibilities has become apparent interest has grown in the technologies that would decrease the production of contaminated water and make its treatment less costly This is the first book to address the mine water issue head on The authors explain the complexities of mine water pollution by reviewing the hydrogeological context of its formation and provide an up to date presentation of prevention and treatment technologies The book will be a valuable reference for all professionals who encounter polluted mine water on a regular or occasional basis **Wind Engineering**
