Questions of I.C. Engines Shivendra Nandan, Prakash Sharma, Satyajeet Kant, An internal combustion engine ICE is a heat engine in which the combustion of a fuel occurs with an oxidizer usually air in a combustion chamber that is an integral part of the working fluid flow circuit In an internal combustion engine the expansion of the high temperature and high pressure gases produced by combustion applies direct force to some component of the engine The force is applied typically to pistons turbine blades a rotor or a nozzle This force moves the component over a distance transforming chemical energy into useful work This replaced the external combustion engine for applications where weight or size of the engine is important
