Ganesh, Sanjay Mohapatra, 2014-07-08 This book deals with complex variants of Travelling Salesman Problem TSP and
Vehicle Routing Problem VRP within the manufacturing and service industries The objective is to develop heuristics for these
supply chain problems in order to offer practical solutions to improve operational efficiency These heuristics are evaluated
using benchmark and derived data sets Case studies pertaining to logistics in different industries including textile machinery
manufacturing and banking are also included to demonstrate the created heuristics High competition in today s global
market has forced the organizations to invest in and focus on their logistics system The critical function of logistics is the
transportation within and across various supply chain entities Both supply and distribution procedure require effective
transportation management A small improvement in routing problems can lead to huge logistics savings in absolute terms

This book should appeal to executives researchers and consultants seeking supply chain management solutions **Social and Behavioral Sciences, Human Services and Management**, 1988 Advances In Deterministic And Stochastic Analysis Peter Lax, David Mumford, Philippe G Ciarlet, Duong H Phong, Nguyen Minh Chuong, 2007-04-24 This volume collects articles in pure and applied analysis partial differential equations geometric analysis and stochastic and infinite dimensional analysis In particular the contributors discuss integral and pseudo differential operators which play an important role in partial differential equations Other methods of solving the partial differential equations are considered such as the min max approach to variational problems and boundary value problems The foundations of quantum mechanics from the viewpoints of infinite dimensional spaces and Bell s inequality and contraction are also mentioned Supply Chain Engineering A. Ravi Ravindran, Donald P. Warsing, Jr., Paul M. Griffin, 2023-08-30 This new edition textbook continues down the path that the first edition winner of the 2013 IISE Joint Publishers Book of the Year Award successfully carved out The textbook targets engineering students and emphasizes the use of operations research models and solution methods important in the design control operation and management of global supply chains Completely updated Supply Chain Engineering Models and Applications Second Edition stresses quantitative models and methods highlights global supplier selection and vendor risk management techniques and discusses the use of multiple criteria decision making models in supply chain management The new edition includes chapters on health and humanitarian supply chains including disaster management and logistics modeling and on warehousing and distribution Disruptions to global supply chains due to the COVID 19 pandemic are discussed throughout the book Industry and government strategies to make the global supply chains resilient are also presented Thirty four case studies have been included to illustrate various supply chain models and methods Exercises are included at the end of each chapter and a solutions manual and PowerPoint slides are available for qualified textbook adoptions The new edition continues to target upper level undergraduate and graduate students in engineering as well as MBA students in operations management logistics and supply chain management programs that emphasize quantitative analysis It is also useful as a reference for technical professionals and researchers in industrial engineering supply chain management procurement logistics and health administration Power Systems Operation with 100% Renewable Energy Sources Sanjeevikumar Padmanaban, Sharmeela Chenniappan, Sivaraman Palanisamy, 2023-10-24 Power Systems Operation with 100% Renewable Energy Sources combines fundamental concepts of renewable energy integration into power systems with real world case studies to bridge the gap between theory and implementation The book examines the challenges and solutions for renewable energy integration into the transmission and distribution grids and also provides information on design analysis and operation Starting with an introduction to renewable energy sources and bulk power systems including policies and frameworks for grid upgradation the book then provides forecasting modeling and analysis techniques for renewable energy sources Subsequent chapters discuss grid code requirements and compliance before presenting a detailed

break down of solar and wind integration into power systems Other topics such as voltage control and optimization power quality enhancement and stability control are also considered Filled with case studies applications and techniques Power Systems Operation with 100% Renewable Energy Sources is a valuable read to researchers students and engineers working towards more sustainable power systems Explains Volt Var control and optimization for both transmission grid and distribution Discusses renewable energy integration into the weak grid system along with its challenges examples and case studies Offers simulation examples of renewable energy integration studies that readers will perform using advanced simulation tools Presents recent trends like energy storage systems and demand responses for improving stability and reliability

Evolutionary Computation in Combinatorial Optimization Christine Zarges,Sébastien Verel,2021-03-26 This book constitutes the refereed proceedings of the 21st European Conference on Evolutionary Computation in Combinatorial Optimization EvoCOP 2021 held as part of Evo 2021 as Virtual Event in April 2021 co located with the Evo 2021 events EvoMUSART EvoApplications and EuroGP The 14 revised full papers presented in this book were carefully reviewed and selected from 42 submissions They cover a wide spectrum of topics ranging from the foundations of evolutionary algorithms and other search heuristics to their accurate design and application to combinatorial optimization problems Fundamental and methodological aspects deal with runtime analysis the structural properties of fitness landscapes the study of core components of metaheuristics the clever design of their search principles and their careful selection and configuration Applications cover problem domains such as scheduling routing search based software engineering and general graph problems The range of topics covered in this volume reflects the current state of research in the fields of evolutionary computation and combinatorial optimization

Sharing Economy Ming Hu,2019-01-11 This edited book examines the challenges and opportunities arising from today s sharing economy from an operations management perspective Individual chapter authors present state of the art research that examines the general impact of sharing economy on production and consumption the intermediary role of a sharing platform crowdsourcing management and context based operational problems Sharing economy refers to a market model that enables and facilitates the sharing of access to goods and services For example Uber allows riders to share a car Airbnb allows homeowners to share their extra rooms with renters Groupon crowdsources demands enabling customers to share the benefit of discounted goods and services whereas Kickstarter crowdsources funds enabling backers to fund a project jointly Unlike the classic supply chain settings in which a firm makes inventory and supply decisions in sharing economy supply is crowdsourced and

can be modulated by a platform The matching supply with demand process in a sharing economy requires novel perspectives and tools to address challenges and identify opportunities The book is comprised of 20 chapters that are divided into four parts The first part explores the general impact of sharing economy on the production consumption and society The second part explores the intermediary role of a sharing platform that matches crowdsourced supply with demand The third part investigates the crowdsourcing management on a sharing platform and the fourth part is dedicated to context based operational problems of popular sharing economy applications While sharing economy is becoming omnipresence the operations management OM research community has begun to explore and examine different business models in the transportation healthcare financial accommodation and sourcing sectors This book presents a collection of the state of the art research work conducted by a group of world leading OM researchers in this area Not only does this book cover a wide range of business models arising from the sharing economy but it also showcases different modeling frameworks and research methods that cannot be missed Ultimately this book is a tour de force informative and insightful Christopher S Tang Distinguished Professor and Edward Carter Chair in Business Administration UCLA Anderson School of Management
