*Mathematics Rebooted* Lara Alcock, 2017-09-29 Would you like to understand more mathematics Many people would Perhaps at school you liked mathematics for a while but were then put off because you missed a key idea and kept getting stuck Perhaps you always liked mathematics but gave it up because your main interest was music or languages or science or philosophy Or perhaps you studied mathematics to advanced levels but have now forgotten most of what you once knew Whichever is the case this book is for you It aims to build on what you know revisiting basic ideas with a focus on meaning Each chapter starts with an idea from school mathematics often primary school mathematics and gradually builds up a network of links to more advanced material It explores fundamental ideas in depth using insights from research in mathematics education and psychology to explain why people often get confused and how to overcome that confusion For nervous readers it will build confidence by clarifying basic ideas For more experienced readers it will highlight new connections to more advanced material Throughout the book explains how mathematicians think and how ordinary people can understand and enjoy mathematical ideas and arguments If you would like to be better informed about the intrinsic elegance of mathematics this engaging guide is the place to start [Mathematics: All That Matters](#) Mike Askew, 2015-02-26 Mathematics often gets a bad press Describing someone as calculating or rational is hardly as flattering as being labelled artistic or creative and mathematicians in movies or novels are often portrayed as social misfits who rarely get the guy or girl No wonder some folks say oh I don't care for mathematics I was never any good at it with a wistful sense of pride Yet professional mathematicians talk of the subject differently They look for elegant solutions to problems revel in playing around with mathematical ideas and talk of the creative nature of mathematics As the Russian mathematician Sophia Kovalevskaya said It is impossible to be a mathematician without being a poet in soul So why is there such a gap between the views of everyday folks and professional mathematicians Part of the problem lies in how most of us were taught mathematics in school The mathematics served up there is presented as a series of decontextualised abstract ideas wrested from the human struggles and interactions that gave birth to the ideas Through looking at some of the history of mathematics psychological studies into how we come to know mathematics and key ideas in mathematics itself the intent of this book is if not to make

the reader fall in love with mathematics then at least to come to understand its nature a little better and perhaps care a little more for it In short this book explores the human side of maths     Statistik für Journalist:innen Julia Lück, Julia Lück-Benz, 2022-01-17 Arbeitslosenquote Wahlumfragen Infiziertenzahlen Daten sind aus dem journalistischen Alltag nicht mehr wegzudenken Wie Journalist:innen Statistiken für ihre Arbeit richtig nutzen können erklärt dieses Buch Julia Lück-Benz geht dabei auf den gesamten statistischen Prozess ein Sie zeigt auf worauf bereits bei der Fragestellung und Datenbeschaffung zu achten ist Ausführlich erklärt sie die Grundlagen für eine kompetente Datenanalyse und vermittelt die notwendigen Kenntnisse zum kritischen Umgang mit bereits existierenden Statistiken Auch die verschiedenen Visualisierungsmöglichkeiten führt sie auf Kurzum ein Must have für alle angehenden Journalist:innen die Zahlen und Daten besser verstehen und richtig einsetzen wollen     *Agent Zo* Clare Mulley, 2024-05-16 SHORTLISTED FOR THE WOMEN S PRIZE FOR NON FICTION 2025 A masterfully written biography inspiring and powerful Gripping moving and important SIMON SEBAG MONTEFIORE *Agent Zo* is a triumph Absolutely essential reading HALLIE RUBENHOLD The astonishing story of an extraordinary woman JONATHAN FREEDLAND *Agent Zo* tells the incredible true story of Elbieta Zawacka the WW2 resistance fighter known as Zo The only woman to reach London from Warsaw during the Second World War as an emissary of the Polish Home Army command Zo undertook two missions in the capital before secret Special Operations Executive training in the British countryside As the only female member of the Polish elite Special Forces the SOE affiliated Silent Unseen Zo became the only woman to parachute from Britain to Nazi German occupied Poland There whilst being hunted by the Gestapo who arrested her entire family she played a key role in the Warsaw Uprising and ultimately in the liberation of Poland After the war Zo was demobbed as one of the most highly decorated women in Polish history Yet the Soviet backed post war Communist regime not only imprisoned her but ensured that her remarkable story remained hidden for over forty years Now through new archival research and exclusive interviews with people who knew and fought alongside Zo Clare Mulley brings this forgotten hero back to life transforming the way we see female agency in the Second World War Deeply researched and written with verve thoughtful as well as action packed The Times     The Well-Trained Mind Susan Wise Bauer, Jessie Wise, 2024-04-02 The classic handbook on home schooling updated for a new generation of parents and students Is your child getting lost in the system becoming bored losing his or her natural eagerness to learn If so it may be time to take charge of your child s education by doing it yourself The Well Trained Mind will instruct you step by step on how to give your child an academically rigorous comprehensive education from preschool through high school one that will train him or her to read to think to understand to be well rounded and curious about learning Veteran home educator Susan Wise Bauer outlines the classical pattern of education called the trivium which organizes learning around the maturing capacity of the child s mind and comprises three stages the elementary school grammar stage when the building blocks of information are absorbed through memorization and rules the middle school logic stage in which the student begins to think more
