Infrared and Raman Spectroscopic Imaging Reiner Salzer, Heinz W. Siesler, 2014-11-03 This second edition of the successful ready reference is updated and revised with approximately 30% new content to reflect the numerous instrumental developments and improvements as well as the significant expansion of this rapidly developing field For example the combination of IR imaging with AFM has enhanced the achievable lateral resolution by an order of magnitude down to a few hundred nanometers thus launching a multiplicity of new applications in material science Furthermore Raman and IR spectroscopic imaging have become key technologies for the life sciences and today contribute tremendously to a better and more detailed understanding of numerous biological and medical research topics The topical structure of this new edition is now subdivided into four parts The first treats the fundamentals of the instrumentation for infrared and Raman imaging and mapping and an overview on the chemometric tools for image analysis The second part describes a wide variety of applications ranging from biomedical via food agriculture and plants to polymers and pharmaceuticals This is followed by a description of imaging techniques operating beyond the diffraction limit while the final part covers special methodical developments and their utility in specific fields With its many valuable practical tips this is a must have overview for researchers in academic and industrial laboratories wishing to obtain reliable results with this method

Chemistry and Industry, 2002 *Linear Electrodynamical Response of Topological Semimetals* Artem V. Pronin, 2023-08-17 This book provides a model description for the electromagnetic response of topological nodal semimetals and summarizes recent experimental findings in these systems Specifically it discusses various types of topological semimetals Dirac Weyl nodal line triple point and multifold semimetals and provides description for the characteristic features of the linear electrodynamical response for all these types of materials Topological semimetals possess peculiar bulk electronic band structure which leads to unusual electrodynamical response For example the low energy inter band optical conductivity of nodal semimetals is supposed to demonstrate power law frequency dependence and the intra and inter band contributions to the conductivity are often mixed Further the magneto optical response is also unusual because of the non equidistant spacing between the Landau levels Finally in semimetals with chiral electronic bands e g in Weyl semimetals the simultaneous application of parallel magnetic and electric fields leads to the chiral anomaly i e to a misbalance between the electrons with different chiralities This misbalance affects the electrodynamics properties of the material and can be detected optically All these points are addressed here in detail The book is written for a wide audience of physicists working in the field of topological condensed matter physics It gives a pedagogical introduction enabling graduate students and non experts to familiarize themselves with the subject *Fourier Transforms* Goran Nikolic, 2011-04-01 New analytical strategies and techniques are necessary to meet requirements of modern technologies and new materials In this sense this book provides a thorough review of current analytical approaches industrial practices and strategies in Fourier transform application **Metal Soaps**

in Art Francesca Casadio, Katrien Keune, Petria Noble, Annelies Van Loon, Ella Hendriks, Silvia A. Centeno, Gillian Osmond, 2019-03-23 This goes to reference work surveys the current state of knowledge in the field of metal soap related degradation phenomena in art works. It contains detailed descriptions and images of the different phenomena and addresses the practical aspects of soap formation, preventive conservation and treatment. The occurrence of metal soaps is one of the defining issues in the conservation of painted surfaces and one that presently leaves innumerable open questions. It is estimated that around 70% of paintings in museum collections are affected by some form of metal soap related degradation. In recent years significant advances have been made in the detection and characterization of these compounds through interdisciplinary approaches including conventional spectroscopy and microscopy as well as emerging synchrotron based techniques. This book for the first time captures a panoramic overview of the state of knowledge of metal soaps related to both scientific analysis and implications for conservation and treatment. It also critically examines open questions. The book is accessible to audiences with varied backgrounds e.g. conservators, students of conservation science while simultaneously presenting the technical details indispensable for academics and researchers active in this field. *American Laboratory*, 2002

Modern Polymer Spectroscopy Peter Wilhelm, 2009-02-05 Containing selected presentations from both academic institutions and industry held at the 17th European Symposium on Polymer Spectroscopy ESOPS17 this volume covers the latest developments in the spectroscopic characterization of polymeric materials. As such the papers cover such methods as infrared and Raman spectroscopy and imaging NMR and ESR spectroscopy dielectric spectroscopy also in combination with light and electron microscopy and near field imaging

Cai Guo-Qiang Rachel Rivenc, 2025-06-24 This groundbreaking book provides the first material study of the celebrated contemporary artist Cai Guo Qiang known worldwide for his use of subversive materials particularly gunpowder. Cai Guo Qiang China b 1957 is among the most prominent contemporary artists active today. His prolific diverse creative practice which includes gunpowder drawings and paintings explosion events videos multimedia installations and site specific works draws on a personal belief system that freely blends symbols and tenets from Eastern and Western traditions. Cai's output seeks to establish dialogues among different cultures different periods of time and even different species always while probing our shared humanity and the connections that can be divined across space and time out of chaos and disorder. Based on in depth interviews between the author and artist and with studio assistants as well as extensive examination sampling and scientific analysis of a wide range of artworks this publication addresses the implications of Cai's distinctive materials and processes and their associated conservation issues. Written for conservation scientists conservators specialists in contemporary art history museum curators collections managers practicing artists collectors and art enthusiasts this book offers insights into the life methods and materials of a leading figure in the art world. The technical discussions provide essential findings that will inform strategies for the future care of his works. *Advances in Porous Semiconductor Research* Thierry Djenizian, Nicolas Hans Voelcker, 2020-03-30 *Nachrichten aus der Chemie*
