**Teaching and Learning Secondary School Mathematics** Ann Kajander, Jennifer Holm, Egan J Chernoff, 2018-10-24

This volume brings together recent research and commentary in secondary school mathematics from a breadth of contemporary Canadian and International researchers and educators. It is both representative of mathematics education generally as well as unique to the particular geography and culture of Canada. The chapters address topics of broad applicability such as technology in learning mathematics, recent interest in social justice contexts in the learning of mathematics as well as Indigenous education. The voices of classroom practitioners, the group ultimately responsible for implementing this new vision of mathematics teaching and learning, are not forgotten. Each section includes a chapter written by a classroom teacher, making this volume unique in its approach. We have much to learn from one another, and this volume takes the stance that the development of a united vision supported by both research and professional dialog provides the first step.

**Collaborating to Support All Learners in Mathematics and Science** Faye Brownlie, Carole Fullerton, Leyton Schnellert, 2011-06-23. In this second volume of *It's All About Thinking*, the authors focus their expertise on the disciplines of mathematics and science, translating principles into practices that help other educators with their students. How can we help students develop the thinking skills they need to become successful learners? How does this relate to deep learning of important concepts in mathematics and science? How can we engage and support diverse learners in inclusive classrooms where they develop understanding and thinking skills? In this book, Faye Leyton and Carole explore these questions and offer classroom examples to help busy teachers develop communities where all students learn. This book is written by three experienced educators who offer a welcoming and can-do approach to the big ideas in math and science education today. In this book, you will find insightful ways to teach diverse learners. Information circles, open-ended strategies, inquiry manipulatives, and models lessons crafted using curriculum design frameworks, UDL, and backwards design, assessment for as and of learning, fully fleshed-out lessons and lesson sequences, inductive teaching to help students develop deep learning and thinking skills in Math and Science, assessment tools and student samples for concepts drawn from learning outcomes in Math and Science, curricula, excellent examples of theory and practice made accessible, real school examples of collaboration, teachers working together to create better learning opportunities for their students.
