

## FUNDAMENTALS OF FLUID POWER CONTROL

This exciting new reference text is concerned with fluid power control. It is an ideal reference for the practicing engineer and a textbook for advanced courses in fluid power control. In applications in which large forces and/or torques are required, often with a fast response time, oil-hydraulic control systems are essential. They excel in environmentally difficult applications because the drive part can be designed with no electrical components, and they almost always have a more competitive power-weight ratio than electrically actuated systems. Fluid power systems have the capability to control several parameters, such as pressure, speed, and position, to a high degree of accuracy at high power levels. In practice, there are many exciting challenges facing the fluid power engineer, who now must have a broad skill set.

John Watton entered industry in 1960 working on the design of heat exchangers. He then studied Mechanical Engineering at Cardiff University, obtaining his BSc degree followed by his PhD degree. In 1969, he returned to industry as a Senior Systems Engineer working on the electrohydraulic control of guided pipe-laying machines. Following a period at Huddersfield University, he returned to Cardiff University in 1979 and was appointed Professor of Fluid Power in 1996, receiving his DSc degree in the same year. He was awarded the Institution of Mechanical Engineers Bramah Medal in 1999 and a special award from the Japan Fluid Power Society in 2005, both for outstanding research contributions to fluid power.

Professor Watton has been continually active as a researcher and consultant with industry in the past 40 years. He has worked on components and systems design, manufacturing plant monitoring, and the design of new mobile machines, and he has acted as an Expert Witness on a variety of fluid power issues. He is a Chartered Engineer, a Fellow of the Institution of Mechanical Engineers, and was elected a Fellow of the Royal Academy of Engineering in 2007.
