Expanding the Numerical Central Conceptual Structure Laura Christine Bofferding, 2011 In working with integers students have difficulties that may extend into middle school and even adulthood However even young children can display insights into negative numbers well before receiving formal instruction Using a pre test instruction post test design this study explores how 61 first graders reason about negative number properties and operations and how their understanding changes depending on the instruction they receive Results of the study indicate that children build on their existing whole number understanding to develop a central conceptual structure for integers Furthermore the process by which they extend their numerical central conceptual structure differs among students their initial schemas together with the form of the integer instruction influence how they reason about and solve integer addition and subtraction problems These results highlight the need to revisit the placement duration and content of integer instruction in curricula

Class Warfare Lois Weis, Kristin Cipollone, Heather Jenkins, 2014-04-02 Stories abound about the lengths to which middle and upper middle class parents will go to ensure a spot for their child at a prestigious university From the Suzuki method to calculus based physics from AP tests all the way back to early learning Kumon courses students are increasingly pushed to excel with that Harvard or Yale acceptance letter held tantalizingly in front of them And nowhere is this drive more apparent than in our elite

secondary schools In Class Warfare Lois Weis Kristin Cipollone and Heather Jenkins go inside the ivy yearning halls of three such schools to offer a day to day week by week look at this remarkable drive toward college admissions and one of its most salient purposes to determine class Drawing on deep and sustained contact with students parents teachers and administrators at three iconic secondary schools in the United States the authors unveil a formidable process of class positioning at the heart of the college admissions process They detail the ways students and parents exploit every opportunity and employ every bit of cultural social and economic capital they can in order to gain admission into a Most Competitive or Highly Competitive Plus university Moreover they show how admissions into these schools with their attendant rankings are used to lock in or improve class standing for the next generation It s a story of class warfare within a given class the substrata of which whether economically racially or socially determined are fiercely negotiated through the college admissions process In a historic moment marked by deep economic uncertainty anxieties over socioeconomic standing are at their highest Class as this book shows must be won and the collateral damage of this aggressive pursuit may just be education itself flattened into a mere victory banner
