**Essentials of the principles and practice of medicine** Henry Hartshorne, 1874     Basic Principles and Techniques of Molecular Quantum Mechanics Ralph E. Christoffersen, 2013-03-08 New textbooks at all levels of chemistry appear with great regularity Some fields like basic biochemistry organic reaction mechanisms and chemical thermodynamics are well represented by many excellent texts and new or revised editions are published sufficiently often to keep up with progress in research However some areas of chemistry especially many of those taught at the graduate level suffer from a real lack of up to date textbooks The most serious needs occur in fields that are rapidly changing Textbooks in these subjects usually have to be written by scientists actually involved in the research which is advancing the field It is not often easy to persuade such individuals to set time aside to help spread the knowledge they have accumulated Our goal in this series is to pinpoint areas of chemistry where recent progress has outpaced what is covered in any available textbooks and then seek out and persuade experts in these fields to produce relatively concise but instructive introductions to their fields These should serve the needs of one semester or one quarter graduate courses in chemistry and biochemistry In some cases the availability of texts in active research areas should help stimulate the creation of new courses New York New York CHARLES R CANTOR Preface This book is not a traditional quantum chemistry textbook Instead it represents a concept that has evolved from teaching graduate courses in quantum chemistry over a number of years and encountering students with diverse backgrounds
