professionalization of architecture and urban design has shut out stakeholder input this book offers a range of methods and theoretical ideas to re tool the design process for better social sustainability The book illustrates these concepts through a series of case studies that have worked around systemic inequalities recaptured stakeholder voices and helped promote spatial and social justice Case studies look at reparative urban and landscape design the United States informal market structures in Nigeria co designed housing for low income communities in India and Brazil and participatory design for housing schools and healthcare facilities in Europe and the U K Essential reading for architects and urban designers seeking alternatives to conventional practice as well as educators and students incorporating social sustainability as a foundational design concept Architecture and Social Sustainability ties together design thinking and action to show architecture s potential for social change The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license

Architecture and the Public Good Tom Spector, 2021-06 Why has explaining the value of the architecture profession proven so difficult The architecture profession can be well defended by demonstrating the public good which results from its protected practice Although the book believes in this approach this approach immediately raises the thorny questions of just who is the public and what is its good To answer these questions to explain why the profession has done a poor job explaining itself and to propose a fresh perspective are the challenges set out in this book The book dissects the internal weaknesses and external forces which have prevented architects from asserting their value to the public explains how the concept of the public is itself widely misunderstood investigates the shifting boundaries of the public and private realms and proposes a series of measures by which we can assess and improve an architectural work s publicness Through a renewed focus on the public good that everyday architects are capable of as a profession the book charts an ultimately optimistic program for the architecture profession s renewal

ARCHINESIA 5 Imelda Akmal (Editor in Chief), GOOD DESIGN IN ARCHITECTURE NOW One of the most important quite dominant processes in architecture is design process and the goal of architecture design is to obtain good design Good design has double meaning aesthetic and ethic In architecture the two should be united as a single goal that a design process should strive for Moreover an architectural product does not only effect its client and architect On a broader level architectural products also effect their surrounding environments In a large scale they may even have an effect on the economy and the social and political condition The question is How does an architectural design attain the label good design We tried to find the answer through a round table discussion by inviting the two groups of professionals in Indonesia practitioners and academics What are their thought on this matter You can peruse them in the main coverage of Archinesia vol 5 Built Project in Southeast Asia House in Semarang Revano Satria Serenity House phuket Duangrit Bunnag Spiral House Surabaya Archimetric B House Bali d associates Recycled Wood House Jakarta Mamostudio 1 The Mori Bandung LABO Ize Hotel Bali Studio Tonton River Safari Singapore DP Architects Anjung Salihara Studiodasar Audi Centre

The Ethical Architect Tom Spector, 2012-04-17 Many believe that the moral mission of architecture has been in serious decline for the last 25 years In this important new book Tom Spector points out the dilemmas of architectural practice and offers a theoretical and practical basis for an examination and transformation of the quandaries the profession now faces What makes a good building or a good architect Are there limits to an architect's ethical or legal responsibilities in a building process where architecture plays an increasingly smaller role Is preservation a moral imperative What happens when building codes and ethical responsibilities are in conflict In *The Ethical Architect* Spector investigates the moral underpinnings and implications of leading architectural theories subjecting them to the analytical techniques of moral philosophy His conclusions provide a road map to help architects make the right decision in the difficult tradeoffs that confront designers on a daily basis Spector estimates that more than 100 000 decisions go into the design of an average sized building *The Ethical Architect* is a work of theory but refers to real buildings and real world problems It is Spector's call to arms for his profession and a must read for practicing architects and students alike

City Nicole Gardner, 2024-07-03 *Scaling the Smart City The Design and Ethics of Urban Technology* engages with the smart city as a problem of scale. It disentangles the smart city from its corporate and technocratic strong hold by presenting an accessible design framework that productively aligns philosophical thinking on technology with foundational technical understandings of urban technology and smart system design. *Scaling the Smart City The Design and Ethics of Urban Technology* complements and mediates between critical social theory perspectives of the smart city and technically comprehensive case studies. It examines these case examples and critiques design prototypes by threading the overarching principles of the smart city through urban spatial and personal scales. The knowledge and know how to design and create urban technologies and smart cities is steadily moving from a niche field to a core industry competency. *Scaling the Smart City The Design and Ethics of Urban Technology* outlines a unique cross scalar design framework developed to teach smart cities design to designers and engineers. It unpacks the backbox of smart city initiatives and demystifies physical computing system design concepts. The book's analysis of real world case examples and design prototypes aims to demonstrate how design thinking and practice can better engage with the ethical implications of creating urban technologies and smart systems for society. It uses a clear accessible and instructive style of writing that synthesizes relevant scholarship and concepts to develop the reader's foundational understanding of the contemporary smart city paradigm. It also explores the ethical implications of urban technologies and smart city initiatives. This book is an invaluable resource for readers in the established fields and professions of design architecture urban design and city planning as well as the emerging fields of urban technology and urban interaction design. Connects theory and practice to extend understanding of urban technologies and smart cities. Leverages real world case examples and design prototypes to explore critical philosophical and ethical questions around the implications of technology in the urban and built environment. Provides an accessible and illustrative guide to technical principles of urban sensing and sense making apparatus foundational to the design of urban technology and smart cities. Utilizes visual iconography and diagramming to illustrate urban technology concepts configurations sequences interactivity and technical systems. **Architecture, Materiality and Society** Anna-Lisa Müller, W.

Reichmann, 2015-05-27 This book examines the extent to which the insights of STS can be used to analyse the role of architecture in and for social life. The contributions examine the question of whether architecture and thus materiality as a whole has agency. The book also proposes a theoretical and methodological approach on how to research architecture's agency. Sustainability and Design Ethics Tom Russ, 2010-03-25 From microcosm to macrocosm ecodesign green design environmental design and triple bottom line are quickly becoming more than just catchy phrases that describe touchy feely trends. The Rise of Awards in Architecture Jean-Pierre Chupin, Carmela Cucuzzella, Georges Adamczyk, 2022-09-06 This book is the first scientific study to focus on awards in architecture and the built environment investigating their exponential growth since the 1980s The celebration of excellence in architecture and related fields remains a phenomenon on which there is strangely little scientific scrutiny What is to be understood from the plethora of award winning projects award winning buildings and awarded professional practices in the built environment year after year Glossy images partake in an intense ballet at every local regional national or international award ceremony and they are meant to embody proofs of architectural excellence However it is necessary to take a critical distance to question what awards are meant to embody symbolize and perhaps measure Each of the 10 chapters in this volume is centered on one question related to themes as varied as the comparison of Pritzker and Nobel Prizes the Prix de Rome the redefinition of quality through awards green awards and sustainability the multiplication of sustainable awards heritage awards architecture book awards the awarding of school architecture awards as mediations and awards as pedagogical devices Many fields once consolidated have featured a sharp increase in related prizes The original data compiled and summarized in 4 appendices cover more than 150 award granting organizations in some 30 countries Our inventory includes upwards of 24 000 prizes awarded at more than 3 100 events the earliest of which is the first instance of Western architecture's seminal Grand Prix de Rome in France in 1720 A history of contemporary architecture is thus written through press releases that praise the merits of the heroes as much as their works and achievements And while awards can be vehicles that propel architecture forward they can also be Trojan horses in an era that is constantly on the lookout for event
