

Project 1: Topic and system (or product) concept statement

Overview

In this project assignment you get started by establishing the target product or system that you will work on for a client and by writing a system (or product) concept statement.

What To Do

1. Establish a client for your project (virtual or fictitious is ok).
2. Establish a product or application system for which you will develop the user interaction design.
3. Get your client and target product or application system approved by the instructor before the due date for this project part. Earlier approval is better, in case you have to make some adjustments or find a different client.
4. Write and refine (several times) a system concept statement for your target system.

The Importance of Making These Choices

We urge you to choose carefully, since you will be living with your decision for the whole semester. Your choices for a product or system can range from an information system to a Web site to a commercial product such as a new kind of mobile or personal device. You can even design a new system with gestural interaction on a wall-size display. We are requiring you to pick a domain such as those discussed in class on the first day of lectures and listed below. These are not requirements but

- Car + Phone for music experience, or navigation (GPS), or shopping with location based reminders, etc.
- Large public displays in common areas coupled with your phones and proximity
- Bike + exercise coupled with your iDevice to manage your health, fitness, competitive spirit
- Public transportation + iDevice for daily travel or vacations, save energy, bike, car, share-ride, etc.

Please consider a choice that will involve lots of creative design, as that is one of the important emphases in this course. We also urge you to consider a product

pathophysiology and management of liver cirrhosis Michael Praktiknjo, Dominik Bettinger, Golo Ahlenstiel, Xiaolong Qi, 2023-09-07 **Dietary and Nutritional Indices and Chronic Diseases** Sorayya Kheikouri, Mohammad

Alizadeh, Masayo Nakamori Rossignoli, 2024-03-06 Chronic diseases such as diabetes cardiovascular diseases and cancers are known as a substantive worldwide challenge for health systems and are major contributors to mortality and morbidity According to the World Health Organization 71% of all deaths and 63.8 % of Disability Adjusted Life Years DALYs are attributed to chronic diseases The composition of a diet influences health status and affects the occurrence and severity of

chronic diseases As different components of a diet correlate and interact with one another addressing only individual dietary constituents does not usually help in analyzing the extent to which diets may prevent or contribute to the development or progress of chronic diseases In recent years the concept of dietary indices has received more attention by both researchers and clinicians and is used as a means to capture the overall effect of a diet on a specific disease or a group of related illnesses These indices are nutritionally derived mathematical algorithms which are developed on the bases of useful or detrimental nutrients and or food groups Thus the indices are frequently used to elucidate proper aspects of a specific diet such as quality diversity anti inflammatory anti oxidative and or anti glycation potential and acid load Examples include the dietary inflammatory index DII dietary total antioxidant capacity DTAC healthy eating index HEI dietary acid load and so forth There is accumulating evidence indicating a link between scores of dietary and nutritional indices and health outcomes

differential diagnosis of types of skin damage management of fistulas and NPWT procedures NEW Clinical Consult features help in applying concepts to clinical practice showing students and health care professionals how to assess manage and document real life patient and staff encounters using the ADPIE framework NEW two color illustrations and design make the book more visually appealing *Focus on Chronic Pain: Neuropathological Mechanism, Clinical Diagnosis and Treatment* Boris Krylov,Tao Song, Ma Ke, Yan Lu, Dong Huang, 2024-01-15 Pain is an unpleasant sensory and emotional experience and the most frequent causes for patients to seek medical care Persistent chronic pain affects millions of people worldwide causing low quality of health and emotional status as well as posing a significant social and economic burden Chronic pain is the long standing pain that are classified as different types including chronic primary pain and secondary pain types caused by various diseases The complexity of cause and symptom in chronic pain is associated with changes in different levels of nervous system from molecular interaction synaptic connection cellular response and neural circuits The development of new treatments to manage chronic pain shall base on the better standing of the neuropathological mechanism underlying the symptom the exploration on the methods of a better diagnosis and the communication of clinical application standards and results Guidelines for establishing a poison centre ,2021-01-14 Interplay Between Chronic Pain and Affective-Cognitive Alterations: Shared Neural Mechanisms, Circuits, and Treatment Luca Posa, Danilo De Gregorio, Serena Boccella , Kelly Smart, 2025-05-29 Pain is a multidimensional experience involving physical and negative emotional components Chronic pain clinically defined as lasting at least 3 months is a subjective perceptive experience involving affective and cognitive processing rather than a purely sensory phenomenon Patients suffering from persistent pain also experience negative emotions and decreased motivation Cognition is also required in the elaboration of the emotional component of pain and several cortical and limbic regions are involved in perception processing and pain modulation Some critical elements of cognition including memory and attention are unbalanced in patients suffering from chronic pain Nevertheless mood disorders including depression but also anxiety disorders show psychological comorbidity in chronic pain populations Over the last few years critical circuits and signaling pathways underlying the affective and cognitive component of pain emerged and novel targets have been identified for the development of treatment The scope of this research topic is to provide recent advances in the neural basis of emotional aspects of chronic pain The goal of this special issue is to collect research articles and reviews covering the last findings on the modulation of pain by cognitive and emotional states and on the mechanism by which chronic pain alters brain circuitry and ultimately to update the scientific and clinical community on recent findings in this field The research topic welcomes submissions from both academic and industry researchers All submissions should focus on the molecular mechanisms neuronal circuits and therapeutics targeting the mechanisms underlying the cognitive and or affective components in chronic pain conditions This article collection aims to include publications as original research and review articles on the following but not limited topics 1 Basic translational or clinical

studies identifying the neurochemical basis at molecular cellular or circuit level of cognitive and emotional modulation of pain and or chronic pain effects on cognitive emotional circuitry 2 Preclinical or clinical original studies reviews in animals humans presenting data about pharmacological therapeutic targets to promote analgesic and neuromodulator effects in cognitive and emotional deficits which are comorbid with chronic pain 3 Current status of novel translational approaches from animals to humans and vice versa exploring potential biomarkers involved in chronic pain and its emotional cognitive states

Value-Based Nutritional Intervention to Reduce the Progression of Chronic Human Diseases Mohammed S. Razzaque, Azeddine Atfi, 2023-12-08 Nutritional imbalances including various vitamins and minerals magnesium zinc calcium iodine selenium iron and phosphate are associated with the initiation and propagation of various chronic diseases including metabolic and systemic diseases Increased accessibility of value based nutritious foods with professional help to raise the awareness of the long term benefits of healthy eating habits can delay the evolution and progression of chronic human diseases The value based nutritional intervention can improve general health outcomes for patients with chronic diseases and reduce overall care costs

Eating Behavior and Chronic Diseases: Research Evidence from Population Studies Fei Xu, Li Zhao, Xiaoyue Xu, Zumin Shi, 2024-07-29 Eating behavior is a major lifestyle related influencing factor of non communicable chronic diseases NCDs particularly overweight obesity and metabolism syndrome MetS Typically eating behavior refers not only to dietary patterns but also to nutrient intake From the public health perspective population based evidence regarding healthy eating is of significance for policy developments regarding NCDs prevention Eating behavior is time and economic status dependent which may change as age or and socio economic status changes This occurs not only in developing societies but also in economically settled communities Therefore although relationships between eating behaviors dietary pattern nutrients intake and specific NCDs have been examined in different societies further investigations of population level associations between eating behavior and NCDs in different subpopulations general community residents elders children or patients etc especially the interaction of eating behavior and other influences e g physical activity on NCDs remains of continuing importance Meanwhile updating the dietary patterns and nutrient intake levels of different subpopulations is also necessary
