Howell,Charles R. M. Butt,2025-05-27 This book provides a comprehensive overview of the major supergene mineral deposits formed in intensely weathered lateritic terrains It discusses both contemporary and pre existing supergene deposits describing their geological mineralogical and geochemical characteristics Supergene processes of enrichment are those that occur under ambient near surface conditions compared to hypogene processes mostly at depth under higher temperatures and pressures Supergene processes include the predominance of meteoric water circulation with concomitant oxidation and chemical weathering Descending meteoric waters oxidize the primary hypogene minerals and redistribute the chemical elements Residual supergene enrichment occurs as a physical process when the predominant rock forming minerals oxidize and dissolve concentrating ore elements hosted in resistant stable minerals absolute chemical enrichment occurs when the ore elements themselves are leached and migrate in groundwater and precipitate due changes in the pH oxidation potential and chemical composition of water These processes can enrich commercially important elements to produce orebodies formed entirely by supergene processes These include Al bauxite Fe ore Ni Co laterites kaolinite REE clay deposits Nb and REE on carbonatites base metals secondary sulfides and oxidate minerals including gossans gold and surficial U in calcretes **The Green Stone Age: Exploration and Exploitation of Minerals for Green Technologies** M. Smelror,K. Hanghøj,H. Schiellerup,2023-06-21 Raw materials have been essential in the development of all human societies through history and moving into a greener more carbon lean future we become increasingly reliant on access to a growing number of raw materials Minerals for new technologies improving the quality of our lives and the environment are the building blocks of the new Green Stone Age This Special Publication presents ongoing research and mapping programmes focusing on minerals needed for the transformation to greener societies In addition to new exploration models and shared geological information on the different prospective currently mined areas the notion of criticality in different countries is discussed and examples of ongoing national and cross country research and mapping programmes are presented In addition to the resource reserve and technical economic aspects the social and environmental dimensions are also a focus in some of the contributions as holistic approaches to the exploration and exploitation of critical minerals and materials are needed to fulfil the green transition and goals for the Green Stone Age **Minerals Yearbook** Mines Bureau,Geological Survey,Interior Department,2018-04-19 The region of Europe and Central Eurasia defined in this volume encompasses territory that extends from the Atlantic Coast of Europe to the Pacific Coast of the Russian Federation It includes the British Isles Iceland and Greenland a self governing part of the Kingdom of Denmark Included are mineral

Santini,Seamus A. Ward,2018-10-03 Up to 200 million people in 70 countries are at risk from drinking water contaminated with arsenic which is a major cause of chronic debilitating illnesses and fatal cancers Until recently little was known about the mobility of arsenic and how redox transformations determined its movement into or out of water supplies Although human activities contribute to the release of arsenic from minerals it is now clear that bacteria are responsible for most of the redox transformation of arsenic in the environment Bacterial oxidation of arsenite to the less mobile arsenate has been known since 1918 but it was not until 2000 that a bacterium was shown to gain energy from this process Since then a wide range of arsenite oxidizing bacteria have been isolated including aerobes and anaerobes heterotrophs and autotrophs thermophiles mesophiles and psychrophiles This book reviews recent advances in the study of such bacteria After a section on background geology and health issues the main body of the book concerns the cellular machinery of arsenite oxidation It concludes by examining possible applications Topics treated are The geology and cycling of arsenic Arsenic and disease Arsenite oxidation physiology enzymes genes and gene regulation Community genomics and functioning and the evolution of arsenite oxidation Microbial arsenite oxidation in bioremediation Biosensors for arsenic in drinking water and industrial effluents *A-J Mine Project, Juneau* ,1992 **Serbia Mining Laws and Regulations Handbook Volume 1 Strategic Information and Basic Laws** IBP,
