SDN and NFV technologies, when combined, simplify the deployment of network resources, lower capital and operating expenses, and offer greater network flexibility. The increasing usage of NFV is one of the primary factors that make SDN adoption attractive. The integration of these two technologies, SDN and NFV, offer a complementary service with NFV delivering many of the real services controlled in an SDN. While SDN is focused on the control plane, NFV optimizes the actual network services that manage the data flows. Devices such as routers, firewalls, and VPN terminators are replaced with virtual devices that run on commodity hardware in NFV physical networking. This resembles the as-a-service typical model of cloud services in many aspects. These virtual devices can be accessed on demand.

by communication network or data center providers This book illustrates the fundamentals and evolution of SDN and NFV and highlights how these two technologies can be integrated to solve traditional networking problems In addition it will focus on the utilization of SDN and NFV to enhance network security which will open ways to integrate them with current technologies such as IoT edge computing and blockchain SDN based network programmability and current network orchestration technologies The basics of SDN and NFV and associated issues challenges technological advancements along with advantages and risks of shifting networking paradigm towards SDN are also discussed Detailed exercises within the book and corresponding solutions are available online as accompanying supplementary material Cloud and Edge Networking Kamel Haddadou, Guy Pujolle, 2024-01-04 A major transformation in the world of networks is underway as the focus shifts from physical technology to software based solutions In this book the authors present this new generation of networks that are based in the Cloud by detailing the transition from a complex environment to a simple digital infrastructure This infrastructure brings together connected devices the antennas that collect radio waves the optical fibers that carry signals and the data center that handles all of the different processes From this perspective the data center becomes the brain managing network services controls automation intelligence security and other applications This architecture is relevant to carrier networks the Internet of Things enterprise networks and the global networks of the major Internet companies Cloud and Edge Networking further discusses developments at the border of networks the Edge where data is processed as near as possible to the source Over the next ten years the Edge will become a major strategic factor
