Darwin's Roadmap to the Curriculum David Sloan Wilson, Glenn Geher, Hadassah Mativetsky, Andrew C. Gallup, 2019 This volume serves to integrate the vast literature in the interdisciplinary field of Evolutionary Studies EvoS providing clear examples of how evolutionary concepts relate to all facets of life It features chapters that outline a variety of applications to evolution education including improved sustainable development medical practices and creative and critical thinking skills Exploring controversies surrounding evolution education this volume provides a roadmap to asking and answering Darwinian questions across all areas of intellectual inquiry

Handbook of Research on Active Learning and Student Engagement in Higher Education Keengwe, Jared, 2022-06-10 Active learning occurs when a learning task can be related in a non arbitrary manner to what the learner already knows and when there is a personal recognition of the links between concepts The most important element of active learning is not so much in how information is presented but how new information is integrated into an existing knowledge base In order to successfully implement active learning into higher education its effect on student engagement must be studied and considered The Handbook of Research on Active Learning and Student Engagement in Higher Education focuses on assessing the effectiveness of active learning and constructivist teaching to promote student engagement and provides a wide range of strategies and frameworks to help educators and other practitioners examine the benefits challenges and opportunities for using active learning approaches to maximize student learning Covering topics such as online learning environments and engagement approaches this major reference work is ideal for academicians practitioners researchers librarians industry professionals educators and students

Approaches to Plant Evolutionary Ecology G.P. Cheplick, 2015-06-01 Plant evolutionary ecology is a rapidly growing discipline which emphasizes that populations adapt and evolve not in isolation but in relation to other species and abiotic environmental features such as climate Although it departs from traditional evolutionary and ecological fields of study the field is connected to branches of ecology genetics botany conservation and to a number of other fields of applied science primarily through shared concepts and techniques However most books regarding evolutionary ecology focus on animals creating a substantial need for scholarly literature with an emphasis on plants Approaches to Plant Evolutionary Ecology is

the first book to specifically explore the evolutionary characteristics of plants filling the aforementioned gap in the literature on evolutionary ecology. Renowned plant ecologist Gregory P. Cheplick summarizes and synthesizes much of the primary literature regarding evolutionary ecology, providing a historical context for the study of plant populations from an evolutionary perspective. The book also provides summaries of both traditional common gardens, reciprocal transplants, and modern molecular genetic approaches used to address questions about plant adaptation to a diverse group of abiotic and biotic factors. Cheplick provides a rigorously written introduction to the rapidly growing field of plant evolutionary ecology that will appeal to undergraduate and graduate students with an interest in ecology and evolution as well as educators who are teaching courses on related topics.

Biodiversity Edmundas Lekevičius, 2022-09-20. Species are not functionally independent. From a long-term perspective, only an ecosystem with a fully integrated nutrient cycle is alive. The lack of trophic autonomy should be considered one of the key factors that ensure and maintain biodiversity. The variability of abiotic conditions, both in space and in time, also creates a huge diversity of niches and subniches for genotypes and species. In addition, life maintains its essential variables, biomass and productivity, as stable as possible due to the diversity of structures: genes, macromolecules, metabolic pathways, genotypes, species, etc. The structures that reach optima are multiplied and thus activated, while the functioning of those which lost their optima is suppressed. The facts and concepts presented in this monograph thus support the conclusions that a genotype and species diversity is supported by trophic specialisation. b) biodiversity helps to stabilise the functions, essential variables of individuals, populations, and ecological communities. c) in evolution, the emergence of biodiversity is determined by heritable variation and the advantage of specialised, more effective structures over non-specialised ones. d) biodiversity is characterised by its ability to increase itself and to organise itself into relatively consistent structures, which we call production pyramids and nutrient cycles. This book therefore provides an answer to the question why the diversity of life is of such and such a nature.

Evolution Evolving Kevin N. Lala, Tobias Uller, Nathalie Feiner, Marcus Feldman, Scott F. Gilbert, 2024-09-24. A new account of the central role developmental processes play in evolution. A new scientific view of evolution is emerging, one that challenges and expands our understanding of how evolution works. Recent research demonstrates that organisms differ greatly in how effective they are at evolving. Whether and how each organism adapts and diversifies depends critically on the mechanistic details of how that organism operates its development, physiology, and behavior. That is because the evolutionary process itself has evolved over time and continues to evolve. The scientific understanding of evolution is evolving too, with groundbreaking new ways of explaining evolutionary change. In this book, a group of leading biologists draw on the latest findings in evolutionary genetics and evo devo, as well as novel insights from studies of epigenetics, symbiosis, and inheritance, to examine the central role that developmental processes play in evolution. Written in an accessible style and illustrated with fascinating examples of natural history, the book presents recent scientific discoveries that expand evolutionary biology beyond the classical view of gene

transmission guided by natural selection Without undermining the central importance of natural selection and other Darwinian foundations new developmental insights indicate that all organisms possess their own characteristic sets of evolutionary mechanisms The authors argue that a consideration of developmental phenomena is needed for evolutionary biologists to generate better explanations for adaptation and biodiversity This book provides a new vision of adaptive evolution

A Voice in the Wilderness Professor Joseph L Graves Jr., 2022-09-13 Why understanding evolution the most reviled branch of science can help us all from fighting pandemics to undoing racism Evolutionary science has long been regarded as conservative a tool for enforcing regressive ideas particularly about race and gender But in *A Voice in the Wilderness* evolutionary biologist Joseph L Graves Jr once styled as the Black Darwin argues that his field is essential to social justice He shows for example why biological races do not exist He dismantles recent work in human biodiversity seeking genes to explain the achievements of different ethnic groups He decimates homophobia sexism and classism as well As a pioneering Black biologist a leftist and a Christian Graves uses his personal story his journey from a child of Jim Crow to a major researcher and leader of his peers to rewrite his field *A Voice in the Wilderness* is a powerful work of scientific anti racism and a moving account of a trailblazing life

Dinosaurs, Volcanoes, and Holy Writ James L. Hayward, 2020-04-29 An earnest young boy who loves nature grows up the son of a fundamentalist pastor He goes to college trains as a biologist and becomes a successful university professor In the process he finds some of the religious beliefs that carried him through childhood and adolescence indefensible in the face of evidence from biology and geology and even from Scripture itself What's he to do This is the journey of a boy turned scientist who finds a path away from the idols of fundamentalism and toward a universe rich with process intrigue and mystery Along the way he discovers a faith consistent with physical reality one open to beauty kindness and hope

published in Nanomaterials Coevolution of Life on Hosts Dale H. Clayton, Sarah E. Bush, Kevin P. Johnson, 2015-12-24 For most the mere mention of lice forces an immediate hand to the head and recollection of childhood experiences with nits medicated shampoos and traumatic haircuts But for a certain breed of biologist lice make for fascinating scientific fodder especially enlightening in the study of coevolution In this book three leading experts on host parasite relationships demonstrate how the stunning coevolution that occurs between such species in microevolutionary or ecological time generates clear footprints in macroevolutionary or historical time By integrating these scales Coevolution of Life on Hosts offers a comprehensive understanding of the influence of coevolution on the diversity of all life Following an introduction to coevolutionary concepts the authors combine experimental and comparative host parasite approaches for testing coevolutionary hypotheses to explore the influence of ecological interactions and coadaptation on patterns of diversification and codiversification among interacting species Ectoparasites a diverse assemblage of organisms that ranges from herbivorous insects on plants to monogenean flatworms on fish and feather lice on birds are powerful models for the study of coevolution because they are easy to observe mark and count As lice on birds and mammals are permanent parasites that spend their entire lifecycles on the bodies of their hosts they are ideally suited to generating a synthetic overview of coevolution and thereby offer an exciting framework for integrating the concepts of coadaptation and codiversification

Tooth and Claw Robert M. Johnson III, Robert M. Johnson, Sharon L. Gilman, Daniel Abel, 2023-05-09 This book provides a comprehensive coverage of the biology ecology and conservation of top predators including big cats wild dogs sharks raptors marine mammals Orca and others snakes and lizards and humans but it is not encyclopedic in its approach While it incorporates up to date scholarship from practitioners working with a diversity of top predators the book is also accessible for non experts The book is illustrated with a original art and many color photographs Meaning beyond Molecules and Hubris: Religions Are onto Something with Regard to Life and Evolution Ted Christopher, 2023-10-17 Modern science s understanding of life is built upon the belief that all features of life including of course consciousness are completely describable in terms of molecules and their activities From this perspective living beings can be viewed as simply constituting a particular subset of the material universe and as such are ultimately defined by the same laws of physics and chemistry This material only hypothesis is usually referred to as scientific materialism or materialism and it is essentially a modern intellectual fixture If true this hypothesis has profound implications for life and in particular eliminates the possibility of deeper and or religious aspects and of course free will too **Racism, Not Race** Joseph L. Graves, Jr., Alan H. Goodman, 2021-12-07 Winner 2024 W W Howells Prize American Anthropological Association Biological Anthropology Section The science on race is clear Common categories like Black white and Asian do not represent genetic differences among groups But if race is a pernicious fiction according to natural science it is all too significant in the day to day lives of racialized people across the globe Inequities in health wealth and an array of other life outcomes cannot be explained without

referring to race but their true source is racism What do we need to know about the pseudoscience of race in order to fight racism and fulfill human potential In this book two distinguished scientists tackle common misconceptions about race human biology and racism Using an accessible question and answer format Joseph L Graves Jr and Alan H Goodman explain the differences between social and biological notions of race Although there are many meaningful human genetic variations they do not map onto socially constructed racial categories Drawing on evidence from both natural and social science Graves and Goodman dismantle the malignant myth of gene based racial difference They demonstrate that the ideology of racism created races and show why the inequalities ascribed to race are in fact caused by racism Graves and Goodman provide persuasive and timely answers to key questions about race and racism for a moment when people of all backgrounds are striving for social justice Racism Not Race shows readers why antiracist principles are both just and backed by sound science
