**Intelligent Multimedia Data Analysis** Siddhartha Bhattacharyya, Indrajit Pan, Abhijit Das, Shibakali Gupta, 2019-02-19 This volume comprises eight well versed contributed chapters devoted to report the latest findings on the intelligent approaches to multimedia data analysis. Multimedia data is a combination of different discrete and continuous content forms like text, audio, images, videos, animations, and interactional data. At least a single continuous media in the transmitted information generates multimedia information. Due to these different types of varieties, multimedia data present varied degrees of uncertainties and imprecision which cannot be easy to deal by the conventional computing paradigm. Soft computing technologies are quite efficient to handle the imprecision and uncertainty of the multimedia data and they are flexible enough to process the real world information. Proper analysis of multimedia data finds wide applications in medical diagnosis, video surveillance, text annotation, etc. This volume is intended to be used as a reference by undergraduate and post graduate students of the disciplines of computer science, electronics, and telecommunication, information science, and electrical engineering.
