Paul Singh, Dennis R. Heldman, 2008-10-15 This fourth edition of this successful textbook succinctly presents the engineering concepts and unit operations used in food processing in a unique blend of principles with applications Depth of coverage is very high The authors use their many years of teaching to present food engineering concepts in a logical progression that covers the standard course curriculum Both are specialists in engineering and world renowned Chapters describe the application of a particular principle followed by the quantitative relationships that define the related processes solved examples and problems to test understanding Supplemental processes including filtration sedimentation centrifugation and mixing Extrusion processes for foods Packaging concepts and shelf life of foods Expanded information on Emerging technologies such as high pressure and pulsed electric field Transport of granular foods and powders Process controls and measurements Design of plate heat exchangers Impact of fouling in heat transfer processes Use of dimensional analysis in understanding physical phenomena **Scientific and Technical Books in Print**, 1972 **Tubular Heat Exchangers** Samuel Jorge Marques Cartaxo, 2022-04-19 This book explains basics from physical chemistry and fluid mechanics to understand construct and apply tubular heat exchangers for the chemical industry Examples from practice highlight the required equations physical properties and raise critical steps for the design of for example tubular double pipe multi tubes and finned heat exchangers Exercises and corresponding solutions deepen the gained knowledge and clarify the described theory Model Elements and Network Solutions of Heat, Mass and Momentum Transport Processes George L. Danko, 2016-10-26 This work provides an enormous contribution to the broad effort of modeling heat mass and momentum transport in multi physics problems with the development of new solution approaches It revisits the time honored technique of network application using flow network solutions for all transport process components for a coupled modeling task The book further provides as formulation of the conservation laws for mass energy and momentum specifically for the branches and nodes of transport networks using the combination of the Eulerian and Lagrangean modeling methods With the extension of Bernoulli's original concept a new solution is given for the flow field of viscous and compressible fluids as driven by the balance of mechanical energy coupled to the thermodynamics of the transport system Applicable to simple or large scale tasks the new model elements and methods are built on first principles Throughout the work the book provides original formulations their mathematical derivations as well as applications in a numerical solution scheme *The Publishers' Trade List Annual*, 1985 **Books in Series**, 1985 Vols for 1980 issued in three parts Series Authors and Titles Scientific and
