Fundamentals of Investment Appraisal Martina Röhrich, 2010-10-01 How to make sound investment decisions This book is based on long term experience with students especially at the School of International Business of Bremen University of Applied Sciences For a better understanding a case study is constructed to illustrate all methods discussed Written in an easily understood style it focuses on the reality of student life as well as of practitioners The goal of the book is to pace a sure way through the variety of methods Mathematical basics are specifically explained in detail This book shows clearly why there are different methods in investment appraisal and on where to focus in a given situation As all methods are introduced by the same case study it is easy to compare and evaluate the results The statements in the text are further consolidated by abstracts and evaluations of each of the methods Exercises with extensive solutions will lead to the confidence which is necessary for an ease of handling the investment appraisal techniques and for a good preparation for students exams German and international students at universities and other institutions of higher education will find this book an excellent systematic preparation for their exams It is also directed toward members of the general public who need expert guidance in making professional investment decisions Due to the increasing mobility of students and the internationalisation of many economic or business curricula not only do German students tend to study more abroad but also foreign students tend to study more in Germany In German universities the number of courses in the English language is also increasing That is why I have written this text in English A companion volume in German entitled Grundlagen der Investitionsrechnung Eine Darstellung anhand einer Fallstudie is also available In both textbooks the pages are constructed identically Using both textbooks simultaneously will help those students who still lack the necessary business vocabulary in the respective language to reasonably follow a class in English or German This book clearly closes an existing gap in the

literature This is the first book in English about capital expenditure budgeting in the sense as it is usually taught in German higher education institutions As a result international students now have literature covering the contents of a course in investment appraisal in the form of an easy to read case study with easily understood graphics and notations

Fundamentals of Investment Management Geoffrey A. Hirt, Stanley B. Block, 1986 **Life Cycle & Technoeconomic Modeling** Antonio Colmenar Santos, David Borge Diez, Enrique Rosales Asensio, 2020-12-02 This book aims to perform an impartial analysis to evaluate the implications of the environmental costs and impacts of a wide range of technologies and energy strategies This information is intended to be used to support decision making by groups including researchers industry regulators and policy makers Life cycle assessment LCA and technoeconomic analysis can be applied to a wide variety of technologies and energy strategies both established and emerging LCA is a method used to evaluate the possible environmental impacts of a product material process or activity It assesses the environmental impact throughout the life cycle of a system from the acquisition of materials to the manufacture use and final disposal of a product Technoeconomic analysis refers to cost evaluations including production cost and life cycle cost Often in order to carry out technoeconomic analysis researchers are required to obtain data on the performance of new technologies that operate on a very small scale in order to subsequently design configurations on a commercial scale and estimate the costs of such expansions The results of the developed models help identify possible market applications and provide an estimate of long term impacts These methods together with other forms of decision analysis are very useful in the development and improvement of energy objectives since they will serve to compare different decisions evaluating their political and economic feasibility and providing guidance on potential financial and technological risks *The Performance of Socially Responsible Investment Funds in Europe* Eva Maria Kreibohm, 2016-11-30 Socially responsible investing SRI is an investment approach that combines investors financial as well as nonfinancial goals in the security selection process Technically investors can engage in SRI either by directly investing in companies that implement corporate social activities or by investing their money in SRI funds which apply screening criteria to select securities The screening process applied by the SRI funds has led to controversy among academics regarding whether the use of SRI screens in the security selection process influences the financial performance of the funds The empirical study analyzes whether or not the screening process applied by such funds influences their financial performance Previous research mostly has focused on analyzing the performance of SRI equity funds established in the United States The study at hand not only includes SRI equity funds but also SRI balanced and fixed income funds established in Europe the biggest market for SRI globally The study provides unexpected results that are not only of interest for investors who want to get a better understanding of the effect on the financial performance of their portfolios in case SRI funds are added The results are also relevant for SRI fund managers who are interested in promoting their funds and attracting new investors and for academics whose research interests are e g located in the fields of SRI fund

portfolio performances and market efficiencies
