Implementation and Benefits of Digital Twin on Decision Making and Data Quality Management Florian

Blaschke, 2024-04-11. Digital twin technology is becoming important for the realization of Industry 4.0 using cyber-physical systems (CPS) and information technology. CPS form the backbone to support the creation of a network for decentralized and autonomous decision making. The design principles for Industry 4.0 serve as guidelines for virtualization concepts that are virtual copies of the physical world and create a link between the real and virtual worlds to collect data and monitor processes. The so-called digital twin. In this book, a theoretical digital twin-driven decision making model has been developed that combines corporate data quality management, a process digital twin, and a model-driven decision support system. It leverages the benefits of the digital twin to create, test, and build a process in the virtual world that supports decision making by combining data analytics and visualization of insights to help managers make better decisions. **Principles of**

Social Robot Experience Mi Meurer,2025-03-03 Service Roboter halten zunehmend Einzug in die Lebenswelt der Konsumenten und unterst tzen diese bei ihren Alltagst tigkeiten Dadurch ver ndern sie auch die sog Customer Experience CE der Konsumenten Diese Social Robot Experience SRE steht im Zentrum des Bandes Es wird die zentrale Frage untersucht ob und in welcher Richtung der Einsatz

von Social Robots die CE eines Konsumenten verändert. Basierend auf einer Literaturanalyse wird zunächst das sog. IKEV-Modell zur Erklärung der Customer Experience entwickelt, welches nach weiteren konzeptionellen Überlegungen hinsichtlich des Einflusses von Social Robots zu einem SRE-Wirkungsmodell konzeptioniert wird. Die theoretisch konzeptionellen Überlegungen werden sodann am Anwendungsfeld Mensabesuch einer empirischen Prüfung unterzogen. Zu diesem Zweck wird das SRE-Wirkungsmodell zunächst auf den Einsatz des Social Robots Pepper in der Mensa der Universität Trier von dem Kauf bis hin zum Nutzungsprozess angepasst und in einer quantitativen Studie untersucht. Durch die Anwendung eines Experimentaldesigns kann der Effekt von Pepper auf die CE quantifiziert werden. Sowohl die Operationalisierung als auch die empirische Modellprüfung erfolgt über unterschiedliche Ansätze. Mit dem Vergleich ob diese unterschiedlichen Ansätze zu unterschiedlichen Ergebnissen führen, verfolgt der Band auch eine methodische Forschungsintention um

Handlungsempfehlung für die empirische Wissenschaft abzuleiten. **Human-Centered Design and User Experience**

Digital-Twin-Enabled Smart Control Engineering Jairo Viola, YangQuan Chen,2023-03-13 This book presents a novel design framework for the development of Digital Twin (DT) models for process and motion control applications. It is based on system data acquisition using cutting edge computing technologies modelling of physical system behavior through detailed simultaneous simulation of different aspects of the system and optimal dynamic behavior matching of the process. The design framework is enhanced with real time data

analytics to improve the performance of the DT's behavior matching with the real system or physical twin. The methods of creating a DT detailed in Digital Twin Enabled Smart Control Engineering make possible the study of a system for real time controller tuning and fault detection. They also facilitate life cycle analysis for multiple critical and dangerous conditions that cannot be explored in the corresponding real system or physical twin. The authors show how a DT can be exploited to enable self optimizing capabilities in feedback control systems. The DT framework and the control performance assessment, fault diagnosis and prognosis, remaining useful life analysis and self optimizing control abilities it allows are validated with both process and motion control systems and their DTs. Supporting MATLAB based material for a case study and an expanded introduction to the basic elements of DTs can be accessed on an associated website. This book helps university researchers from many areas of engineering to develop new tools for control design and reliability and life cycle assessment and helps practicing engineers working with robotic manufacturing and processing and mechatronic systems to maintain and develop the mechanical tools they use.
