Statistics for Anthropology Lorena Madrigal, 2012-03-01. Anthropology as a discipline is rapidly becoming more quantitative and anthropology students are now required to develop sophisticated statistical skills. This book provides students of anthropology with a clear step-by-step guide to univariate statistical methods, demystifying the aspects that are often seen as difficult or impenetrable. Explaining the central role of statistical methods in anthropology and using only anthropological examples, the book provides a solid footing in statistical techniques. Beginning with basic descriptive statistics, this new edition also covers more advanced methods such as analyses of frequencies and variance, simple and multiple regression analysis with dummy and continuous variables. It addresses commonly encountered problems such as small samples and non-normality. Each statistical technique is accompanied by clearly worked examples and the chapters end with practice problem sets.
