

Our method to detect eye&mouth

- When application of face image recognition is limited to the specific purpose, in the case which one face is always clearly obtained, algorithm for extracting face parts becomes extremely simple by using SYMMETRY.
- We focus bilateral symmetries between and within face parts and detect the symmetry measure on face parts using the gradient directions
- We determine width and height of face parts extraction windows from horizontally and vertically projected histograms of symmetry measures.
- Then we use template matching method to detect eyes and mouth in those reduced search areas.

Computer Analysis of Images and Patterns Franc Solina, Ales Leonardis, 2003-07-31 This volume presents the articles accepted for the 8th International Conference on Computer Analysis of Images and Patterns CAIP 99 held in Ljubljana Slovenia 13 September 1999 The CAIP series of conferences started 14 years ago in Berlin The series served initially as a forum for meetings between scientists from Western and Eastern bloc countries Political circumstances have changed dramatically since the inception of the conference and such contacts are fortunately no longer subject to abstruse While CAIP conferences are still rooted in Central Europe they now attract participants from all over the world We received 120 submissions which went through a thorough double blind review process by the program committee members who had the option of signing additional reviewers The final program consists of 47 oral and 27 poster presentations with authors from 25 different countries The proceedings also include 2 of the 5 invited lectures given at the conference In the name of the steering committee we would like to thank the program committee members and the additional reviewers for their time and efforts Our thanks also go to the authors for their cooperation and meeting of all deadlines

Digital Heritage Reconstruction Using Super-resolution and Inpainting Milind G. Padalkar, Manjunath V. Joshi, Nilay L. Khatri, 2022-06-01 Heritage sites across the world have witnessed a number of natural calamities sabotage and damage from visitors resulting in their present ruined condition Many sites are now restricted to reduce the risk of further damage Yet these masterpieces are significant cultural icons and critical markers of past civilizations that future generations need to see A digitally reconstructed heritage site could diminish further harm by using immersive navigation or walkthrough systems for virtual environments An exciting key element for the viewer is observing fine details of the historic work and viewing monuments in their undamaged form This book presents image super resolution methods and techniques for automatically detecting and inpainting damaged regions in heritage monuments in order to provide an enhanced visual experience The book presents techniques to obtain higher resolution photographs of the digitally reconstructed monuments and the resulting images can serve as input to immersive walkthrough systems It begins with the discussion of two novel techniques for image super resolution and an approach for inpainting a user supplied region in the given image followed by a technique to simultaneously perform super resolution and inpainting of given missing regions It then introduces a method for automatically detecting and repairing the damage to dominant facial regions in statues followed by a few approaches for automatic crack repair in images of heritage scenes This book is a giant step toward ensuring that the iconic sites of our past are always available and will never be truly lost
