Introduction to Logistics Engineering

G. Don Taylor, 2008-12-03 Despite its importance logistics engineering often lags industry requirements especially in terms of engineering based needs Filling the gap between education and practice this brief but comprehensive volume covers the most basic material in the field of logistics engineering making it suitable for those who require an overview of the topic

Operations Research Proceedings 1998 Peter Kall, Hans-Jakob Lüthi, 2013-03-07 This proceedings volume contains a selection of papers presented at the OR 98 conference that was held at the Swiss Federal Institute of Technology ETH in Zurich from August 31 September 3 1998 The selection of papers included in this volume reflects well the number of papers in the corresponding sections at the conference Thus we observe that the intellectual mainstream in Operations Research still is mathematical optimization and its application in logistics and transportation systems In addition to these traditional areas the conference emphasized the potential contributions of Operations Research in the new challenging area of system design and management in the liberalized energy and telecommunication markets

Handbook of Cellular Manufacturing Systems Shahrukh A. Irani, 1999-04-15 Cellular manufacturing CM is the grouping of similar products for manufacture in discrete multi machine cells It has been proven to yield faster production cycles lower in process inventory levels and enhanced product quality Pioneered on a large scale by Russian British and German manufacturers interest in CM methods has grown steadily over the past decade However there continues to be a dearth of practical guides for industrial engineers and production managers interested in implementing CM techniques in their plants Bringing together contributions by an international team of CM experts the Handbook of Cellular Manufacturing Systems bridges this gap in the engineering literature

Decision Analysis, Location Models, and Scheduling Problems H. A. Eiselt, Carl-Louis Sandblom, 2013-06-04 The purpose of this book is to provide readers with an introduction to the fields of decision making location analysis and project and machine scheduling The combination of these topics is not an accident decision analysis can be used to investigate decision scenarios in general location analysis is one of the prime examples of decision making on the strategic level project scheduling is typically concerned with decision making on the tactical level and machine scheduling deals with decision making on the operational level Some of the chapters were originally contributed by different authors and we have made every attempt to unify the notation style and most importantly the level of the exposition Similar to our book on Integer Programming and Network Models Eiselt and Sandblom 2000 the

emphasis of this volume is on models rather than solution methods This is particularly important in a book that purports to promote the science of decision making As such advanced undergraduate and graduate students as well as practitioners will find this volume beneficial While different authors prefer different degrees of mathematical sophistication we have made every possible attempt to unify the approaches provide clear explanations and make this volume accessible to as many readers as possible

Logistics Engineering Handbook G. Don Taylor, 2007-12-14 Achieving state of the art excellence and attaining the cost reductions associated with outstanding logistics efforts is an obvious gain in terms of competitive edge and profitability As logistics tools evolve in comprehensiveness and complexity and the use of these new tools becomes more pervasive maintaining a position of leadership in logisti

Spatial Interaction Models Lina Mallozzi, Egidio D'Amato, Panos M. Pardalos, 2017-04-04 Facility location theory develops the idea of locating one or more facilities by optimizing suitable criteria such as minimizing transportation cost or capturing the largest market share The contributions in this book focus an approach to facility location theory through game theoretical tools highlighting situations where a location decision is faced by several decision makers and leading to a game theoretical framework in non cooperative and cooperative methods Models and methods regarding the facility location via game theory are explored and applications are illustrated through economics engineering and physics Mathematicians engineers economists and computer scientists working in theory applications and computational aspects of facility location problems using game theory will find this book useful

A Reformulation-Linearization Technique for Solving Discrete and Continuous Nonconvex Problems Hanif D. Sherali, W. P. Adams, 2013-04-17 This book deals with the theory and applications of the Reformulation Linearization Convexification Technique RL T for solving nonconvex optimization problems A unified treatment of discrete and continuous nonconvex programming problems is presented using this approach In essence the bridge between these two types of nonconvexities is made via a polynomial representation of discrete constraints For example the binariness on a 0 1

variable x can be equivalently expressed as the polynomial constraint $x^2 - 1 \leq 0$. The motivation for this book is the role of tight linear convex programming representations or relaxations in solving such discrete and continuous nonconvex programming problems. The principal thrust is to commence with a model that affords a useful representation and structure and then to further strengthen this representation through automatic reformulation and constraint generation techniques. As mentioned above, the focal point of this book is the development and application of RLT for use as an automatic reformulation procedure and also to generate strong valid inequalities. The RLT operates in two phases. In the Reformulation Phase, certain types of additional implied polynomial constraints that include the aforementioned constraints in the case of binary variables are appended to the problem. The resulting problem is subsequently linearized except that certain convex constraints are sometimes retained in particular special cases in the Linearization/Convexification Phase. This is done via the definition of suitable new variables to replace each distinct variable product term. The higher dimensional representation yields a linear or convex programming relaxation.
