**FTIR spectroscopy can assist the highly diversified and tradition-bound wine industry in meeting product and quality control challenges.**

**F**FTIR spectroscopy is a nondestructive technique that provides structural information on molecular features of a large range of compounds. Its main advantages are speed, a high degree of automation, medium resolution, and cost-effectiveness. Recent improvements in instrumentation together with advances in fiber optics and chemometrics have provided an analytical tool that is suitable for routine qualitative analysis and process control in many industries.

Although FTIR spectroscopy is widely applied in the food industry, acceptance of this technology in the grape and wine industry has been relatively slow and mainly

Protected designation of origin PDO taken together with other geographical indicators such as protected geographical indication PGI and traditional specialty guaranteed TSG offer the consumer additional guarantees on the quality and authentication of foods. They are important tools that protect the names of regional foods such as wines, cheeses, hams, sausages and olives so that only foods that genuinely originate in a particular region are allowed to be identified as such. The economic value of these regional foods as well as the increased interest from consumers and the food industry about the traceability and origin of food mean that it has become necessary to establish methods for PDO and PGI authentication based on the specific characteristics and chemical markers of these kinds of products. This book offers a complete guide of the methods available to authenticate food PDO beginning with an explanation of the analytical and chemometric methods available for PDO authentication before looking at the main foods covered PGI labels and the social and legal framework for food PGIs. It will be of interest to people engaged in the fields of food production, commercialization and consumption as well as policymakers and control laboratories. Offers a complete guide to the methods available for food Protected Designation of Origin PDO authentication. Explains the analytical and chemometric methods. Focuses on the various food products covered by authentication labels.

**Nutraceuticals in Human Health**

Alessandra Durazzo, Massimo Lucarini, Antonello Santini, 2021-01-21 Nutraceuticals are a challenge for the future of prevention and therapy in healthcare. The possibility to prevent and/or support pharmacological therapy which is nowadays mainly based on pharmaceuticals can be a powerful tool to face pathological chronic long-term diseases in subjects who do not qualify for a pharmacological therapy. Nutraceuticals are obtained from vegetal or animal origin foods and prospective research on these products will clarify their role, safety and efficacy by substantiating their role with clinical data. An effort to clarify their mechanism of action will open a door to the next generation of therapeutic agents that do not propose themselves as an alternative to drugs but instead can be helpful to complement a pharmacological therapy and to prevent the onset of chronic diseases. The market as well as the interest of people in naturally derived remedies and less synthetic pharmaceuticals is growing and the attention of the collective public imagination is nowadays more strongly focused on these food-derived products. This Special Issue is dedicated to the role of and perspectives on nutraceuticals in human health examined from different angles ranging from analytical aspects to clinical trials and from efficacy studies to beneficial effects on health conditions.
