

Problem of the Week

Problem D and Solution

Roll the Dice

Problem

In mathematics we say “fair die” when we mean that there is an equally likely chance of landing on any face of the die. A standard six-sided die has its faces marked with the numbers 1, 2, 3, 4, 5, and 6. The die is fair and each number is used exactly once. A special six-sided die has its faces marked with the numbers 1, 3, 4, 5, 6, and 8. The die is fair and each number is used exactly once. Is it possible to create a second fair, six-sided die marked so that this die and the first special die can be used together to play a board game like *Monopoly*? (Numbers on the faces of this new die may appear more than once.) In other words, does another fair, six-sided die exist so that when this new die and the special die are thrown the sum of the numbers on the top faces of the two dice range from 2 to 12 and the probability of obtaining each sum is the same as it would be if two standard dice had been thrown? If it is possible, what numbers would be on the faces of this new die? If it is not possible, explain why not.

Solution

We first examine what happens when two standard dice are thrown. For each possible roll, we calculate the sum of numbers on the top faces of the dice, and compile this information in a table.

Die 1 \ Die 2	1	2	3	4	5	6
1	2	3	4	5	6	7
2	3	4	5	6	7	8
3	4	5	6	7	8	9
4	5	6	7	8	9	10
5	6	7	8	9	10	11
6	7	8	9	10	11	12

From this table we can determine the probability of each sum by counting the number of ways to get that sum and dividing by 36, the size of the sample space.

$$P(\text{total} = 2) = P(\text{total} = 12) = \frac{1}{36}$$

$$P(\text{total} = 3) = P(\text{total} = 11) = \frac{2}{36}$$

$$P(\text{total} = 4) = P(\text{total} = 10) = \frac{3}{36}$$

$$P(\text{total} = 5) = P(\text{total} = 9) = \frac{4}{36}$$

$$P(\text{total} = 6) = P(\text{total} = 8) = \frac{5}{36}$$

$$P(\text{total} = 7) = \frac{6}{36}$$

We need our new die and the special die to give these same probabilities when rolled together. Since both the special and the new die have 6 sides, the size of the sample space will still be $6 \times 6 = 36$.

We need the sums of the top faces to range from 2 to 12. Since the numbers on our special die are 1, 3, 4, 5, 6 and 8, this means that on our new die, the smallest number must be 1 and the largest number must be 4.
