*Interpreting*

*Archaeology* Alexandra Alexandri, Victor Buchli, John Carman, Ian Hodder, Jonathan Last, Gavin Lucas, Michael Shanks, 2013-11-19 This volume provides a forum for debate between varied approaches to the past The authors drawn from Europe North America Asia and Australasia represent many different strands of archaeology They address the philosophical issues involved in interpretation and a desire among archaeologists to come to terms with their own subjective approaches to the material they study a recognition of how past researchers have also imposed their own value systems on the evidence which they presented Handbook for British and Irish Archaeology, 1997 A one stop truly comprehensive dedicated and reliable sourcebook for archaeology **Landscape Archaeology of the Western Nile Delta** Joshua R.

Trampier, 2014-03-12 Different ideas of what constitutes an archaeological site have developed over two centuries of scholarship and heritage law in Egypt with sites often unconsciously conceived as lands with museum quality pieces and striking monumental mortuary and or epigraphic remains As a result the material record of the powerful dominates Egyptological discourse leaving hundreds of unexplored sites in the Delta floodplain and their potential contributions to a narrative of Egyptian culture largely ignored Attempting to correct this the author integrates historical maps remote sensing data and ancient texts to understand the dynamic landscape of the western Nile Delta Weaving together new archaeological survey Corona satellite images and a targeted program of drill coring this volume offers a palimpsest of settlement and paleoenvironment from the New Kingdom to Late Roman era In the face of forces undermining many sites integrity this study adapts techniques in landscape archaeology to an Egyptian context anticipating triage and salvage in the decades to come

*Contradictions of Archaeological Theory* Sandra Wallace, 2012-01-30 Is current archaeological theory stuck at an impasse Sandra Wallace argues that archaeological theory has become mired as a result of logical and ontological contradictions By showing that these contradictions are a result of common underlying philosophical assumptions and fallacies this book is able to show how a fresh approach to this discipline is necessary to resolve them even if this requires re examining some of the tenants of orthodox archaeology This fresh approach is achieved by using Critical Realism as an under labourer to philosophically evaluate archaeological theory Starting by assessing the historical impact of philosophy on the discipline and then looking at the current relationship between archaeology and the ontology of the material this book facilitates the construction of discipline specific theory by archaeologists The result is an approach to archaeology that allows both students and practitioners to free themselves from endemic contradictions and re discover their approach to archaeological theory

Archaeological Theory in the New Millennium Oliver J. T. Harris, Craig Cipolla, 2017-06-26 Archaeological Theory in the New Millennium provides an account of the changing world of archaeological theory and a challenge to more traditional narratives of archaeological thought It charts the emergence of the new emphasis on relations as well as engaging with other current theoretical trends and the thinkers archaeologists regularly employ Bringing together different strands of global archaeological theory and placing them in dialogue the book explores the similarities and differences between different

contemporary trends in theory while also highlighting potential strengths and weaknesses of different approaches Written in a way to maximise its accessibility in direct contrast to many of the sources on which it draws *Archaeological Theory in the New Millennium* is an essential guide to cutting edge theory for students and for professionals wishing to reacquaint themselves with this field Space, Time, and Archaeological Landscapes Jaqueline Rossignol, LuAnn Wandsnider, 2013-11-11 The last 20 years have witnessed a proliferation of new approaches in archaeological data recovery analysis and theory building that incorporate both new forms of information and new methods for investigating them The growing importance of survey has meant an expansion of the spatial realm of traditional archaeological data recovery and analysis from its traditional focus on specific locations on the landscape archaeological sites to the incorporation of data both on site and off site from across extensive regions Evolving survey methods have led to experiments with nonsite and distributional data recovery as well as the critical evaluation of the definition and role of archaeological sites in data recovery and analysis In both survey and excavation the geomorphological analysis of landscapes has become increasingly important in the analysis of archaeological materials Ethnoarchaeology the use of ethnography to sharpen archaeological understanding of cultural and natural formation processes has concentrated study on the formation processes underlying the content and structure of archaeological deposits These actualistic studies consider patterns of deposition at the site level and the material results of human organization at the regional scale Ethnoarchaeological approaches have also affected research in theoretical ways by expanding investigation into the nature and organization of systems of land use per se thus providing direction for further study of the material results of those systems
