**Simulation of Communication Systems** Philip Balaban, Michel C. Jeruchim, K. Sam Shanmugan, 2012-12-06 Simulation may be defined as the discipline whose objective is to imitate one or more aspects of reality in a way that is as close to that reality as possible indeed an apt synonym that is gaining some currency is artificial reality Under this definition simulation is a very old discipline Probably the first applications of simulation were to scale models of various types of dynamical structures or mechanical devices Man has always looked for ways to try things out before building the real thing this is the motivation behind any form of simulation Thus simulation of communication systems is concerned with imitating some aspects of the behavior of communication systems It is implicit in our use of simulation that the medium so to speak for carrying it out is the digital computer Computer based modeling and simulation of communication systems has only developed in the last 20 years or so since the advent of modern digital computers A variety of modeling and simulation techniques have been developed and described in widely scattered journals but until now there has not been a single volume devoted to the subject We have tried to provide a unified framework that describes both the disciplines involved and the methods of modeling and simulating communication systems and subsystems In the electronic era the first type of computer simulation in today's use of the term took shape in the form of analog computers
