Classical Control System Kunal Chakraborty, 2016-04-15 The Temperature measurement of liquid in a tank can be controlled by classical and advance control algorithms applying PID FUZZY LOGIC SFB LQR Here we consider a three tank noninteracting system We observed that tank1 affects the dynamic behavior of tank2 Similarly tank2 affects the dynamic behavior of tank3 and vice versa because the flow rate F_1 depends on the difference between liquid levels h_1 and h_2 Thus a change in the inlet flowrate affects the liquid level in the tank which in turn affects the temperature of the liquid Basically it is a thermal process Various types of temperature sensors include RTD T C and Thermistor In this particular project the author used a mercury thermometer as sensor Mathematical models of the three tank method give a third order equation Each tank gives a transfer function of the first order system They make it easy to check whether a particular algorithm is giving the requisite results A lot of work has been carried out on the temperature control in terms of its stabilization Many

attempts have been made to control the response of temperature measuring systems **Optimal Estimation of Dynamic**
